Answer: ([SHOW ANSWER](#))

NEW QUESTION: 22

SmartEvent Manager can be used to monitor network traffic?

- A. Yes
- B. VPN
- C. IPS
- D. HTTPS

Answer: C ([LEAVE A REPLY](#))

Yes

SmartEvent Manager can be used to monitor network traffic. IPS (Intrusion Prevention System) is a network security technology that monitors and analyzes network traffic for suspicious activity. SmartEvent Manager can be used to monitor network traffic for IPS attacks. SmartEvent Manager can monitor IPS attacks, IPS Attack High Confidence, IPS Attack Critical Confidence, and IPS Attack Low Confidence. SmartEvent Manager can also monitor IPS attacks for SmartEvent Manager. SmartEvent Manager can monitor IPS attacks for SmartEvent Manager.

NEW QUESTION: 23

SmartEvent Manager can be used to monitor network traffic for VPN attacks?

- A. Yes
- B. No
- C. SmartEvent Manager
- D. VPN

Answer: ([SHOW ANSWER](#))

Yes

SmartEvent Manager can be used to monitor network traffic for VPN attacks. SmartEvent Manager can monitor VPN attacks, VPN Attack High Confidence, VPN Attack Critical Confidence, and VPN Attack Low Confidence. SmartEvent Manager can also monitor VPN attacks for SmartEvent Manager. SmartEvent Manager can monitor VPN attacks for SmartEvent Manager.

NEW QUESTION: 141

Alice and Bob are configuring a Cisco MDPS (Cisco Management Data Protection Service) on a Cisco ISE (Identity Services Engine). Which of the following is a valid MDPS configuration command?

- A. mdps enable
- B. mdps enable
- C. mdps enable
- D. mdps enable

Answer: B (LEAVE A REPLY)

NEW QUESTION: 142

Which of the following is a valid configuration command for a Cisco ISE (Identity Services Engine) VPN configuration?

- A. ip local pool vpn 10.10.10.1-10.10.10.10
- B. ip local pool vpn 10.10.10.1-10.10.10.10 trac.defaults neo_always_connected true
- C. ip local pool vpn 10.10.10.1-10.10.10.10
- D. ip local pool vpn 10.10.10.1-10.10.10.10 trac.defaults neo_remember_user_password true

Answer: C (LEAVE A REPLY)

NEW QUESTION: 143

Which of the following is a valid configuration command for a Cisco ISE (Identity Services Engine) Guest Access configuration?

No.	Hits	Name	Source	Destination	VPN	Services & Applications	Action	Track
1	0	Guest Access	GuestUsers	* Any	* Any	* Any	Accept	Log

- A. ip local pool guest 10.10.10.1-10.10.10.10
- B. ip local pool guest 10.10.10.1-10.10.10.10 'ID 10.10.10.1-10.10.10.10'
- C. ip local pool guest 10.10.10.1-10.10.10.10 'ID 10.10.10.1-10.10.10.10'
- D. ip local pool guest 10.10.10.1-10.10.10.10 'ID 10.10.10.1-10.10.10.10'

Answer: A (LEAVE A REPLY)

The correct answer is A. The configuration command for a Cisco ISE (Identity Services Engine) Guest Access configuration is ip local pool guest 10.10.10.1-10.10.10.10. The other options are invalid because they use single quotes around the IP address range, which is not a valid configuration syntax for this command.

NEW QUESTION: 147

SmartConsole 19009, 18190 & 443. (☐☐ ☐☐ ☐☐ ☐☐☐☐.)

- A. ☐☐☐☐☐☐☐☐☐☐.

- B. `show session`.
- C. `show session id`.
- D. `show session id`.

Answer: A ([LEAVE A REPLY](#))

00

`show session id` command is used to display the details of the sessions established on the device. The output of the command shows the session ID, the user who established the session, the session type, and the session status. The session ID is a unique identifier for each session. The user is the name of the user who established the session. The session type is the type of session, such as `cli`, `web`, or `telnet`. The session status is the current status of the session, such as `active` or `inactive`.

NEW QUESTION: 148

Which of the following is not a SandBlast feature? SandBlast SandBlast Mobile SandBlast Cloud SandBlast On-premise?

- A. Check Point Protect
- B. `show session`
- C. `show session id`
- D. `show session id`

Answer: D ([LEAVE A REPLY](#))

00

SandBlast is a cloud-based security solution that provides protection for mobile devices and IoT devices. SandBlast Mobile is a feature of SandBlast that provides protection for mobile devices. SandBlast Cloud is a feature of SandBlast that provides protection for IoT devices. SandBlast On-premise is a feature of SandBlast that provides protection for on-premise devices. Check Point Gateway is not a SandBlast feature.

NEW QUESTION: 149

Which of the following is not a Check Point command? `fwaccel` `fw ctl` `tcpdump` `cphaprob`

- A. `fwaccel`
- B. `fw ctl`
- C. `tcpdump`
- D. `cphaprob`

Answer: C ([LEAVE A REPLY](#))

00

`tcpdump` is a network monitoring tool that captures network traffic. `fwaccel` is a Check Point command that enables hardware acceleration. `fw ctl` is a Check Point command that enables debugging. `cphaprob` is a Check Point command that enables VRRP. `fwaccel` is not a Check Point command.

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 230

Which of the following is a high availability solution for a single server?

- A. ClusterXL with NSRP
- B. VRRP with HSRP
- C. VRRP with IP address
- D. ClusterXL with VRitP

Answer: ([SHOW ANSWER](#))

ClusterXL

ClusterXL with VRRP is a high availability solution for a single server. ClusterXL R81.10 with VRRP is a high availability solution for a single server. ClusterXL with Check Point is a high availability solution for a single server. ClusterXL with IP address is a high availability solution for a single server.

ClusterXL with VRRP is a high availability solution for a single server. ClusterXL with HSRP is a high availability solution for a single server. ClusterXL with IP address is a high availability solution for a single server. ClusterXL with VRitP is a high availability solution for a single server. ClusterXL with NSRP is a high availability solution for a single server. ClusterXL with Check Point is a high availability solution for a single server. ClusterXL with IP address is a high availability solution for a single server.

VRRP(Virtual Router Redundancy Protocol) is a high availability solution for a single server. VRRP with IP address is a high availability solution for a single server. VRRP with HSRP is a high availability solution for a single server. VRRP with Check Point is a high availability solution for a single server. VRRP with IP address is a high availability solution for a single server.

NSRP(NetScreen Redundancy Protocol) is a high availability solution for a single server. NSRP with Juniper Networks is a high availability solution for a single server. NSRP with Check Point is a high availability solution for a single server.

HSRP(Hot Standby Router Protocol) is a high availability solution for a single server. HSRP with Cisco is a high availability solution for a single server. HSRP with IP address is a high availability solution for a single server. HSRP with Check Point is a high availability solution for a single server.

IP address is a high availability solution for a single server. IP address with LVS(Linux Virtual Server) is a high availability solution for a single server. IP address with Check Point is a high availability solution for a single server.

D. True, `show cpllic` command is used to check the status of the CPLIC.

Answer: (SHOW ANSWER)

True

The `show cpllic` command is used to check the status of the CPLIC. The output of the command shows the status of the CPLIC, the number of connections, and the number of sessions. The output also shows the status of the Security Management Server (SMS) IP address.

NEW QUESTION: 237

Which of the following is a valid IP address for a host in a network with a 10.10.10.0/24 network?

- A. 10.10.10.255
- B. 10.10.10.0
- C. 10.10.10.1
- D. R81 10.10.10.1

Answer: (SHOW ANSWER)

True

The IP address 10.10.10.1 is a valid IP address for a host in a network with a 10.10.10.0/24 network. The IP address 10.10.10.255 is the broadcast address, and the IP address 10.10.10.0 is the network address. The IP address R81 10.10.10.1 is not a valid IP address.

NEW QUESTION: 238

Which of the following is a valid command to configure a host with the IP address 192.168.0.10?

NEW QUESTION: 366

Which command is used to add a user to the RBA database?

- A. rba user <username> password <password>
- B. rba user <username> password
- C. rba <username> password <password>
- D. <username> password

Answer: (SHOW ANSWER)

CC

The correct answer is C. The command to add a user to the RBA database is `rba user <username> password <password>`. The `rba` command is used to manage the RBA database. The `add` command is used to add a user to the database. The `delete` command is used to delete a user from the database. The `flush` command is used to flush the RBA database. The `ack` command is used to acknowledge a message. The `dispatcher` command is used to manage the dispatcher. The `maestro` command is used to manage the Maestro Hyperscale Orchestrator. The `sdf` command is used to manage the SDF. The `l2tp` command is used to manage L2TP. The `sticky` command is used to manage sticky sessions. The `securexl` command is used to manage SecureXL. The `checkpoint` command is used to manage Check Point. The `clusterxl` command is used to manage ClusterXL. The `clusterxl` command is used to manage ClusterXL. The `clusterxl` command is used to manage ClusterXL.

NEW QUESTION: 367

Which command is used to flush the RBA database?

- A. SDF(flush user) flush ACK
- B. Dispatcher(dispatcher) flush(dispatcher)
- C. flush user Maestro Hyperscale Orchestrator flush user.
- D. flush user SDF(flush user)

Answer: A (LEAVE A REPLY)

NEW QUESTION: 368

Which command is used to manage the dispatcher?

- A. flush user Maestro Hyperscale Orchestrator flush user.
- B. flush user SPI flush user.
- C. flush user Maestro Hyperscale Orchestrator flush user.
- D. L2TP flush user flush user.

Answer: A (LEAVE A REPLY)

CC

The correct answer is A. The command to manage the dispatcher is `flush user Maestro Hyperscale Orchestrator flush user`. The `flush` command is used to flush the RBA database. The `ack` command is used to acknowledge a message. The `dispatcher` command is used to manage the dispatcher. The `maestro` command is used to manage the Maestro Hyperscale Orchestrator. The `sdf` command is used to manage the SDF. The `l2tp` command is used to manage L2TP. The `sticky` command is used to manage sticky sessions. The `securexl` command is used to manage SecureXL. The `checkpoint` command is used to manage Check Point. The `clusterxl` command is used to manage ClusterXL. The `clusterxl` command is used to manage ClusterXL. The `clusterxl` command is used to manage ClusterXL.

□□ □□ □□□ □□□ □□□ □ □□□?

- A. □□□□□□□ fw logswitch□ □□□□□.

- B. `fwm logswitch`
- C. `fwm logswitch`
- D. `fw logswitch`

Answer: [\(SHOW ANSWER\)](#)

https://sc1.checkpoint.com/documents/R81/WebAdminGuides/EN/CP_R81_NextGenSecurityGateway_Guide/Topics-FWG/CLI/fw-logswitch.htm

NEW QUESTION: 469

Which command is used to configure the log switch for the firewall?

- A. `fwm logswitch`
- B. `MS Office, PDF`
- C. `3`
- D. `fw logswitch`

Answer: [A \(LEAVE A REPLY\)](#)

The correct answer is `fwm logswitch`. This command is used to configure the log switch for the firewall. The other options are incorrect: `MS Office, PDF` is a file type, `3` is a number, and `fw logswitch` is not a valid command.

NEW QUESTION: 470

SmartConsole is used to manage the firewall. Which of the following is not a valid SmartConsole command?

- A. `fwm`
- B. `fw`
- C. `fwm /`
- D. `fw`

Answer: [B \(LEAVE A REPLY\)](#)

The correct answer is `fw`. SmartConsole is used to manage the firewall. The other options are valid SmartConsole commands: `fwm`, `fwm /`, and `fw`.
