- C. □□ □□, □□/□□. □□□ □□
- D. □□/□□, □□ □□, □□ □□

Answer: A ([LEAVE A REPLY](#))

Acquiring Cloud Accounts

Cloud Security Posture Management must complete an acquisition process once it connects to a public cloud in order to collect inventory data. During this process, CSPM incorporates cloud resources such as regions, Security Groups, and instances from the cloud service provider. Administrators may acquire account data from AWS, Azure, and GCP public clouds.

To begin acquiring data from a public cloud, Cloud Security Posture Management must assign an operational mode to the cloud account. Administrators may assign one of the following operations to the cloud account:

- Read Only - Monitors and visualizes cloud accounts through Cloud Security Posture Management.

D. vCore□

Answer: A (LEAVE A REPLY)

Check Point Certified Cloud Specialist

Check Point®
SOFTWARE TECHNOLOGIES LTD.

CloudGuard Licensing and Support

As with all commercial software, CloudGuard Network requires a license for full functionality. CloudGuard Network has two different licensing systems, Bring Your Own and Pay As You Go.

Pay As You Go

Pay As You Go (PAYG) licensing operates on a purely cloud-based business model. The license is purchased through the Cloud Service Provider (CSP) and is based on the number of cores assigned to the Check Point virtual machine. Pricing for PAYG customers can vary, but the Check Point support level is constant.

Security Management Server API log file location?

- A. \$FWDIR/log/api.elg
- B. /var/tmp/api.elg
- C. /var/log/api.elg
- D. /opt/log/api.elg

Answer: A (LEAVE A REPLY)

API Troubleshooting

API issues involves executing CLI commands on the SMS to perform status checks and to modify the system. The following table reflects the commands relevant to examining the API status:

Command	Operation
tail -f \$FWDIR/log/api.elg	Investigates system issues with API calls
api status	Performs a system check of the API status.
api restart	Restarts the API.
api reconf	Reconfigures the API instead of restarting it.

Answer: ([SHOW ANSWER](#))

Adaptive Security Policy

Creating a Security Policy for public cloud environments requires an adaptive framework that responds to the dynamic changes of the Workload. An adaptive Security Policy uses the CloudGuard Controller to establish a unified policy that granularly defines cloud-based resources. This policy format broadens the scope of network security by protecting resources created from one or more CSPs.

An adaptive Security Policy assists Security and Development teams with streamlining their operations. Administrators may import cloud objects at any time and without the need to schedule a formal system change request to implement a new policy installation to update the rulebase enforced on the Security Gateway. As a result, application owners gain control of their application deployments since they can add and remove resources without impacting security.
