NEW QUESTION: 36

Which of the following is a common method for exploiting a vulnerability in a web application?

- A. SQL injection
- B. Cross-site scripting
- C. Denial of service
- D. Buffer overflow

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 37

Which of the following is a common method for exploiting a vulnerability in a web application? (Select all that apply)

- A. SQL injection
- B. Cross-site scripting
- C. Denial of service
- D. Buffer overflow

Answer: C ([LEAVE A REPLY](#))

Which of the following is a common method for exploiting a vulnerability in a web application? (Select all that apply)

SQL injection, Cross-site scripting, Denial of service, Buffer overflow, and others are common methods for exploiting vulnerabilities in web applications. However, Denial of Service (DoS) is a type of attack that aims to make a service unavailable to its intended users by overwhelming it with a flood of illegitimate requests. This is often achieved by exploiting a vulnerability in the target system, such as a buffer overflow or a denial of service attack. Therefore, Denial of Service is a common method for exploiting a vulnerability in a web application.

NEW QUESTION: 38

Which of the following is a common method for exploiting a vulnerability in a web application?

- A. SQL injection
- B. Cross-site scripting
- C. Denial of service
