Gather Support Materials

Description

To reduce the time needed and file size for the support materials, select the object you are investigating. For example, the volume that is not responding. The cluster will only gather support materials for the appliance that contains the object.

Note: You must use the vSphere Web Client to download log files from vCenter Server.

Object Type

Use this filter to find the object more easily. If the object is of a type not included in the filter, select Appliances and choose the appliance that contains the object.
