NEW QUESTION: 71

Terraform is a tool for managing infrastructure as code. It allows you to define your infrastructure in a declarative configuration file, and then Terraform will automatically create and manage the infrastructure for you. This is a great way to ensure that your infrastructure is consistent and reproducible. Terraform is also a great way to manage complex infrastructure, such as multi-cloud environments or large-scale data centers. If you're looking for a way to manage your infrastructure, Terraform is a great option.

- A.** Terraform `rm -rf`

A. TF_LOG_PAIRH

B. TF_LOG

C. TF_VAR_log_path

D. TF_VAR_log_level

Answer: (SHOW ANSWER)

Terraform `TF_LOG` can be set to `TRACE`, `DEBUG`, `INFO`, `WARN`, or `ERROR`.
TRACE is the most verbose, followed by DEBUG, INFO, WARN, and ERROR.
Terraform uses the `TF_LOG` environment variable to set the log level.

NEW QUESTION: 78

Terraform can be used to manage infrastructure as code.

A. True

B. False

Answer: A (LEAVE A REPLY)

Terraform is an open-source tool for managing infrastructure as code. It allows you to define your infrastructure in a declarative language, and then use that code to provision and manage your infrastructure.

NEW QUESTION: 79

Terraform can be used to manage infrastructure as code.

A. True

B. False

C. True

D. False

Answer: D (LEAVE A REPLY)

Terraform can be used to manage infrastructure as code. It allows you to define your infrastructure in a declarative language, and then use that code to provision and manage your infrastructure. Terraform can be used to manage infrastructure as code in a variety of ways, including using the Terraform CLI, the Terraform web interface, or the Terraform API.

* Terraform can be used to manage infrastructure as code in a variety of ways, including using the Terraform CLI, the Terraform web interface, or the Terraform API.

* Terraform can be used to manage infrastructure as code in a variety of ways, including using the Terraform CLI, the Terraform web interface, or the Terraform API.

* Terraform can be used to manage infrastructure as code in a variety of ways, including using the Terraform CLI, the Terraform web interface, or the Terraform API.

= [Terraform can be used to manage infrastructure as code in a variety of ways, including using the Terraform CLI, the Terraform web interface, or the Terraform API]

Terraform `aws_s3_bucket` `backend.tf`

```
terraform {
  backend "s3" {
    bucket = "my-tf-bucket"
    region = "us-east-1"
  }
}
```

Which of the following is a valid S3 bucket name for the Terraform backend?

- A. my-tf-bucket
- B. my_tf_bucket
- C. my_tf_bucket
- D. my_tf_bucket

Answer: [\(SHOW ANSWER\)](#)

The correct answer is B. my_tf_bucket. The bucket name must be lowercase, contain only lowercase letters, numbers, and hyphens, and must not start or end with a hyphen.

NEW QUESTION: 90

Terraform can be used to manage infrastructure as code. Which of the following is a valid Terraform command to initialize a new workspace?

- A. terraform init
- B. terraform workspace init

Answer: B [\(LEAVE A REPLY\)](#)

Terraform can be used to manage infrastructure as code. The terraform init command is used to initialize a new workspace. The terraform workspace init command is used to initialize a new workspace for a specific environment.

Which of the following is a valid Terraform command to initialize a new workspace?

Answer: B

NEW QUESTION: 91

Which of the following is a valid Terraform command to initialize a new workspace?

- A. terraform init
- B. terraform workspace init

Answer: B [\(LEAVE A REPLY\)](#)

Terraform can be used to manage infrastructure as code. The terraform init command is used to initialize a new workspace. The terraform workspace init command is used to initialize a new workspace for a specific environment.

NEW QUESTION: 107

Which of the following is a valid Terraform command to initialize a new workspace?

- A. `terraform init`
- B. `terraform workspace init`

Answer: B ([LEAVE A REPLY](#))

Terraform is a tool for managing infrastructure as code. It allows you to define your infrastructure in a declarative language and then use Terraform to provision and manage that infrastructure. Terraform uses a configuration file to define the infrastructure and then uses the Terraform CLI to execute the configuration. The Terraform CLI has several commands, including `init`, `plan`, `apply`, and `destroy`. The `init` command is used to initialize a new workspace. It creates a `.terraform` directory in the current directory and downloads the necessary providers and modules. The `workspace init` command is used to initialize a new workspace within an existing Terraform configuration. It creates a new workspace and sets it as the current workspace. The `workspace init` command is the correct answer to the question.

- * 1: `terraform init` - HashiCorp | Terraform | HashiCorp
- * 2: `terraform workspace init` - Stack Overflow
- * 3: `terraform workspace init` | Terraform - HashiCorp

NEW QUESTION: 108

Which of the following is a valid Terraform command to apply a configuration?

- A. `terraform apply`
- B. `terraform workspace apply`
- C. `terraform workspace apply`
- D. `terraform apply`
- E. `terraform apply`

Answer: D,E ([LEAVE A REPLY](#))

Terraform is a tool for managing infrastructure as code. It allows you to define your infrastructure in a declarative language and then use Terraform to provision and manage that infrastructure. Terraform uses a configuration file to define the infrastructure and then uses the Terraform CLI to execute the configuration. The Terraform CLI has several commands, including `init`, `plan`, `apply`, and `destroy`. The `apply` command is used to apply a configuration. It creates the infrastructure defined in the configuration file. The `workspace apply` command is used to apply a configuration within an existing Terraform configuration. It creates a new workspace and sets it as the current workspace. The `workspace apply` command is the correct answer to the question.
