NEW QUESTION: 109

Which of the following is a common security risk?

- A. Weak passwords
- B. Outdated software
- C. Strong encryption
- D. Secure protocols

Answer: A ([LEAVE A REPLY](#))

Which of the following is a common security risk?

IS (Information Security) is a field of study that focuses on protecting information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction. It is a multidisciplinary field that involves the application of security principles and practices to the protection of information and information systems. IS is a critical component of any organization's security strategy, and it is essential for organizations to have a strong IS program in place to protect their information and information systems from security risks.

IS is a field of study that focuses on protecting information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction. It is a multidisciplinary field that involves the application of security principles and practices to the protection of information and information systems. IS is a critical component of any organization's security strategy, and it is essential for organizations to have a strong IS program in place to protect their information and information systems from security risks.

ISACA, CISA

ISACA, CISA are two of the most well-known IS organizations. ISACA is a global organization that provides certification and accreditation services for IS professionals. CISA is a certification program for IS professionals that is recognized by ISACA.

NEW QUESTION: 117

Which of the following is a common cause of a system crash?

- A. Out of memory.
- B. Incorrect user permissions.
- C. Corrupted data.
- D. Hardware failure.

Answer: C ([LEAVE A REPLY](#))

Question:

Answer:

Out of memory is a common cause of a system crash.

Incorrect user permissions can cause a system crash. Corrupted data can cause a system crash. Hardware failure can cause a system crash.

NEW QUESTION: 118

Which of the following is a common cause of a system crash?

- A. Out of memory.
- B. Incorrect user permissions.
- C. Corrupted data.
- D. Hardware failure.

Answer: C ([LEAVE A REPLY](#))

Question:

Out of memory is a common cause of a system crash. Incorrect user permissions can cause a system crash. Corrupted data can cause a system crash. Hardware failure can cause a system crash.

CISA is a common cause of a system crash.

Out of memory is a common cause of a system crash. Incorrect user permissions can cause a system crash. Corrupted data can cause a system crash. Hardware failure can cause a system crash.

"Out of memory is a common cause of a system crash, incorrect user permissions can cause a system crash."

Out of memory is a common cause of a system crash. Incorrect user permissions can cause a system crash. Corrupted data can cause a system crash. Hardware failure can cause a system crash.

Out of memory is a common cause of a system crash. Incorrect user permissions can cause a system crash. Corrupted data can cause a system crash. Hardware failure can cause a system crash.

Out of memory is a common cause of a system crash. Incorrect user permissions can cause a system crash. Corrupted data can cause a system crash. Hardware failure can cause a system crash.
