Which ID is used to identify the data source? Which of the following is a common method for securing data in transit? Which ID is used to identify the data source?

NEW QUESTION: 24

Which of the following is a common method for securing data in transit? Which ID is used to identify the data source? Which of the following is a common method for securing data in transit? Which ID is used to identify the data source?

- A. KVM
- B. HTTPS
- C. VPN
- D. TLS

Answer: A ([LEAVE A REPLY](#))

Which of the following is a common method for securing data in transit?

Which ID is used to identify the data source?

KVM (Kernel-based Virtual Machine) is a software-based virtualization technology that allows multiple operating systems to run on a single physical machine. It is commonly used for server virtualization. HTTPS (Hypertext Transfer Protocol Secure) is a secure communication protocol for transmitting data over the Internet. VPN (Virtual Private Network) is a technology that allows users to connect to a private network over a public network. TLS (Transport Layer Security) is a cryptographic protocol designed to provide communications security over a computer network.

NEW QUESTION: 25

Which of the following is a common method for securing data in transit? Which ID is used to identify the data source? Which of the following is a common method for securing data in transit? Which ID is used to identify the data source?

- A. KVM
- B. HTTPS
- C. VPN
- D. TLS

Answer: ([SHOW ANSWER](#))

Which of the following is a common method for securing data in transit?

Which ID is used to identify the data source? Which of the following is a common method for securing data in transit? Which ID is used to identify the data source? B. 192.168.0.1

C. 192.168.0.255

D. 192.168.0.256

Answer: D ([LEAVE A REPLY](#))

00

XSS(aka Cross Site Scripting) is a type of security vulnerability that occurs when an attacker is able to inject malicious code into a web application. This code can then be executed by the browser of any user who visits the affected page. XSS attacks can be used to steal sensitive information, such as passwords and credit card numbers, or to deface a website. There are three main types of XSS: Reflected, Stored, and DOM-based. Reflected XSS occurs when the malicious code is injected into the page and is reflected back to the user's browser. Stored XSS occurs when the malicious code is stored on the server and is served to all users who visit the page. DOM-based XSS occurs when the malicious code is injected into the page and is executed by the browser. XSS attacks can be prevented by using input validation, output encoding, and Content Security Policies (CSPs).

Cloud computing is a model of computing that allows users to access and use computing resources over the Internet. This model is characterized by several key features, including on-demand self-service, broad network access, multi-tenancy, rapid elasticity, and measured service.

Answer: D (LEAVE A REPLY)

"The NIST Definition of Cloud Computing" defines SaaS as "Software as a Service". It is a model of cloud computing where the provider hosts applications and makes them available to users over the Internet. Users do not manage or control the underlying infrastructure, operating systems, or storage. They only manage their data and configure the applications. SaaS is the simplest and most basic cloud computing model. It is often used for email, CRM, and ERP systems. SaaS is also the most secure and reliable cloud computing model because the provider is responsible for the security and availability of the applications.

NEW QUESTION: 144

Which ID card type is used for identification and access control?

- A. Smart card
- B. Photo ID
- C. Driver's license
- D. Social Security card

Answer: D (LEAVE A REPLY)

Smart cards are used for identification and access control. They contain a microchip that stores data and can be used to authenticate users. Photo IDs are used for identification but do not provide access control. Driver's licenses are used for identification but do not provide access control. Social Security cards are used for identification but do not provide access control.

NEW QUESTION: 145

Which ID card type is used for identification and access control?

- A. XML
- B. HTML
- C. SAML
- D. JSON

Answer: (SHOW ANSWER)

SAML (Security Assertion Markup Language) is an ID card type used for identification and access control. It is a standard for exchanging authentication and authorization data between different security domains. SAML is based on XML and is used to represent security assertions. SAML is used in many applications, including single sign-on (SSO) and federated identity management. SAML is also used to represent security assertions in a JSON format. SAML is a standard for exchanging authentication and authorization data between different security domains. SAML is based on XML and is used to represent security assertions. SAML is used in many applications, including single sign-on (SSO) and federated identity management. SAML is also used to represent security assertions in a JSON format. SAML is a standard for exchanging authentication and authorization data between different security domains. SAML is based on XML and is used to represent security assertions. SAML is used in many applications, including single sign-on (SSO) and federated identity management. SAML is also used to represent security assertions in a JSON format.

Which of the following is a common cause of a network outage?
A. A power outage
B. A configuration error
C. A hardware failure
D. A software bug

NEW QUESTION: 222

Which of the following is a common cause of a network outage?

- A. A power outage
- B. A configuration error
- C. A hardware failure
- D. A software bug

Answer: A ([LEAVE A REPLY](#))

A power outage is a common cause of a network outage. A power outage can occur for a variety of reasons, such as a power line being cut, a power surge, or a power outage at the power source. A power outage can cause a network outage because the network devices, such as routers and switches, need power to operate. If the power is out, the network devices will not be able to operate, and the network will be down.

NEW QUESTION: 223

Which of the following is a common cause of a network outage?

- A. A power outage
- B. A configuration error
- C. A hardware failure
- D. SLA

Answer: B ([LEAVE A REPLY](#))

Configuration error is a common cause of a network outage. A configuration error can occur for a variety of reasons, such as a misconfigured router, a misconfigured switch, or a misconfigured firewall. A configuration error can cause a network outage because the network devices will not be able to operate correctly. For example, if a router is misconfigured, it may not be able to route traffic correctly, and the network will be down. SLA is a common cause of a network outage. SLA is a Service Level Agreement, which is a contract between a service provider and a customer. SLA defines the level of service that the service provider will provide to the customer. If the service provider does not meet the SLA, it can cause a network outage.

NEW QUESTION: 224

Which of the following is a common cause of a network outage?
A. A power outage
B. A configuration error
C. A hardware failure

- A. A power outage
- B. A configuration error
- C. A hardware failure

BCDR 是 4 个 8 位寄存器，每个寄存器 8 位，共 32 位。
BCDR 是 4 个 8 位寄存器？

NEW QUESTION: 289

Which of the following is a common cause of a network outage?

A. Router failure

B. Cable failure

C. Power outage

D. Configuration error

Answer: A ([LEAVE A REPLY](#))

Which of the following is a common cause of a network outage? Router failure is a common cause of a network outage. Other causes include cable failure, power outage, and configuration error. Router failure is the most common cause of a network outage. Router failure can be caused by a variety of factors, including hardware failure, software failure, and misconfiguration. Router failure can result in a complete loss of network connectivity. Router failure can also result in a partial loss of network connectivity, such as a loss of access to certain resources. Router failure can be prevented by implementing a variety of measures, including regular maintenance, backup, and redundancy. Router failure can be detected by monitoring network performance and using network management tools. Router failure can be resolved by replacing the failed router or by restoring the network to its previous state.

NEW QUESTION: 290

Which of the following is a common cause of a network outage?

Router failure

A. Router failure

B. Cable failure

C. Power outage

D. Configuration error

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 291

Which of the following is a common cause of a network outage?

DLDP is a common cause of a network outage. DLDP is a protocol used to detect and prevent loops in a network. DLDP is implemented on a per-interface basis. DLDP can be configured to detect and prevent loops in a network. DLDP can be configured to detect and prevent loops in a network. DLDP can be configured to detect and prevent loops in a network.

Router failure

A. 192.168.0.0
B. 192.168.0.1
C. 192.168.0.255
D. 192.168.0.256

Answer: B ([LEAVE A REPLY](#))

XSS(Cross Site Scripting) is a type of security vulnerability that occurs when an attacker is able to inject malicious code into a web page. This code can then be executed by the browser of any user who visits the page. XSS attacks can be used to steal sensitive information, such as passwords and credit card numbers, or to deface a website. XSS attacks can also be used to launch other types of attacks, such as Denial of Service (DoS) attacks.

NEW QUESTION: 338

Which of the following is a common method for protecting Personally Identifiable Information (PII) in a database?
Which of the following is a common method for protecting PII?

- A. Encryption
- B. Hashing
- C. Masking
- D. Tokenization

Answer: C ([LEAVE A REPLY](#))

Masking is a technique used to protect sensitive data by replacing it with a placeholder or a less sensitive value. This is often used for PII in databases. Encryption, hashing, and tokenization are also methods for protecting sensitive data, but masking is specifically designed for PII protection.

NEW QUESTION: 339

Which of the following is a common method for protecting sensitive data in a database?
Which of the following is a common method for protecting sensitive data?

- A. Encryption
- B. Hashing
- C. Masking
- D. ID Tokenization

Answer: D ([LEAVE A REPLY](#))

Encryption, hashing, and masking are common methods for protecting sensitive data. ID tokenization is a technique used to protect sensitive data by replacing it with a unique identifier or token. This is often used for PII in databases.

NEW QUESTION: 340

REST API is a common method for protecting sensitive data in a database. Which of the following is a common method for protecting sensitive data in a database?

- A. NetBIOS
- B. VPN
- C. TLS
- D. TLS

Answer: ([SHOW ANSWER](#))

REST (Representational State Transfer) is a common method for protecting sensitive data in a database. REST uses TLS (Transport Layer Security) to protect sensitive data. REST uses SSL (Secure Sockets Layer) to protect sensitive data. REST uses TLS to protect sensitive data.

NEW QUESTION: 379

Which of the following is a cloud-based directory service?

- A. LDAP
- B. GitHub
- C. Active Directory
- D. Active Directory

Answer: (SHOW ANSWER)

GitHub is a cloud-based directory service. It is a cloud-based directory service that allows users to store and manage their code. It is a cloud-based directory service that allows users to store and manage their code.

NEW QUESTION: 380

Which of the following is a cloud-based directory service?

Which of the following is a cloud-based directory service?

- A. LDAP, Active Directory, GitHub
- B. Active Directory, GitHub, LDAP
- C. LDAP, GitHub, Active Directory
- D. GitHub, LDAP, Active Directory

Answer: (SHOW ANSWER)

LDAP

eDiscovery is a cloud-based directory service. It is a cloud-based directory service that allows users to store and manage their code. It is a cloud-based directory service that allows users to store and manage their code.

NEW QUESTION: 381

Which of the following is a cloud-based directory service?

- A. LDAP
- B. GitHub
- C. Active Directory
- D. Active Directory

Answer: (SHOW ANSWER)

Which of the following is a cloud-based directory service? It is a cloud-based directory service that allows users to store and manage their code. It is a cloud-based directory service that allows users to store and manage their code.

NEW QUESTION: 403

Which of the following is a type of network intrusion detection system (NIDS)?

- A. Host-based IDS
- B. Network-based IDS
- C. Signature-based IDS
- D. Anomaly-based IDS

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 404

Which of the following is a type of network intrusion prevention system (NIPS)?

- A. IDS
- B. IPS
- C. WAF
- D. WAF

Answer: A ([LEAVE A REPLY](#))

Which of the following is a type of network intrusion prevention system (NIPS)?

Which of the following is a type of network intrusion prevention system (NIPS)?

IDS (Intrusion Detection System) is a type of network intrusion prevention system (NIPS) that monitors network traffic for signs of malicious activity. It can detect and alert on suspicious activity, but it does not prevent the attack. IPS (Intrusion Prevention System) is a type of network intrusion prevention system (NIPS) that monitors network traffic for signs of malicious activity and can prevent the attack. WAF (Web Application Firewall) is a type of network intrusion prevention system (NIPS) that monitors network traffic for signs of malicious activity and can prevent the attack. WAF (Web Application Firewall) is a type of network intrusion prevention system (NIPS) that monitors network traffic for signs of malicious activity and can prevent the attack.

NEW QUESTION: 483

Which ITIL process is responsible for ensuring that the organization's IT services are available to the business at the agreed level of service?

- A. Incident management
- B. Problem management
- C. Change management
- D. Service level management

Answer: (SHOW ANSWER)

Service level management is the ITIL process responsible for ensuring that the organization's IT services are available to the business at the agreed level of service.

Service level management (SLM) is the process of ensuring that the organization's IT services are available to the business at the agreed level of service. It involves defining, measuring, and reporting on service levels.

Service level management (SLM) is the process of ensuring that the organization's IT services are available to the business at the agreed level of service. It involves defining, measuring, and reporting on service levels. SLM is a key component of ITIL and is responsible for ensuring that the organization's IT services are available to the business at the agreed level of service. ITIL is a framework for IT service management that provides a set of best practices for managing IT services.

NEW QUESTION: 484

Which of the following is a characteristic of a service level agreement (SLA)?

- A. It is a contract between the service provider and the customer.
- B. It is a document that defines the service level.
- C. It is a document that defines the service level and the penalties for non-compliance.
- D. It is a document that defines the service level and the penalties for non-compliance.

Answer: A (LEAVE A REPLY)

SLA

Service level agreement (SLA) is a contract between the service provider and the customer. It defines the service level and the penalties for non-compliance. SLA is a key component of ITIL and is responsible for ensuring that the organization's IT services are available to the business at the agreed level of service.

NEW QUESTION: 485

Which of the following is a characteristic of a service level agreement (SLA)?

- A. It is a contract between the service provider and the customer.
- B. It is a document that defines the service level.
- C. It is a document that defines the service level and the penalties for non-compliance.
- D. It is a document that defines the service level and the penalties for non-compliance.

Answer: (SHOW ANSWER)

SLA

Service level agreement (SLA) is a contract between the service provider and the customer. It defines the service level and the penalties for non-compliance. SLA is a key component of ITIL and is responsible for ensuring that the organization's IT services are available to the business at the agreed level of service.

Service level agreement (SLA) is a contract between the service provider and the customer. It defines the service level and the penalties for non-compliance. NEW QUESTION: 496

Which of the following is a common method for data exchange between applications?

- A. JSON
- B. RDP
- C. API
- D. XML

Answer: (SHOW ANSWER)

API (Application Programming Interface) is a set of protocols and standards for building and integrating different software applications. It allows different software applications to communicate with each other. JSON (JavaScript Object Notation) is a lightweight data interchange format. RDP (Remote Desktop Protocol) is a protocol for remote control of a computer. XML (eXtensible Markup Language) is a markup language for encoding documents in a format that is both human-readable and machine-readable.

NEW QUESTION: 525

Which of the following is a characteristic of SaaS (Software as a Service)?

- A. It is hosted on the customer's premises.
- B. It is managed by the customer.
- C. It is managed by the provider.
- D. It is hosted on the provider's premises.

Answer: (SHOW ANSWER)

Correct Answer: C

SaaS is a cloud-based software delivery model where the software is hosted by the provider and accessed by the customer over the internet. The provider is responsible for the maintenance, updates, and security of the software. The customer does not need to install or manage the software on their own infrastructure. This model allows for easy scalability and reduces the upfront costs of software acquisition.

NEW QUESTION: 526

Which of the following is a characteristic of a cloud-based service?

- A. It is hosted on the customer's premises.
- B. It is managed by the customer.
- C. It is managed by the provider.
- D. It is hosted on the provider's premises.

Answer: B (LEAVE A REPLY)

Correct Answer: B

Explanation:

Cloud-based services are hosted and managed by the provider. The customer does not need to install or manage the software on their own infrastructure. This model allows for easy scalability and reduces the upfront costs of software acquisition.

- A. 2010
- B. 2000
- C. 1995
- D. 1990

Answer: (SHOW ANSWER)

1995 Directive 95/46 EC is the primary legal instrument in the EU which governs the processing of personal data. It sets out the principles and conditions under which personal data may be lawfully processed. It also sets out the rights of individuals in relation to their personal data. The Directive was adopted in 1995 and has since been replaced by the General Data Protection Regulation (GDPR) in 2018.

NEW QUESTION: 531

Which of the following is not a type of eDiscovery?

- A. Email
