- C.
- D.

Answer: (SHOW ANSWER)

Service Level Agreement (SLA) is a contract between a service provider and a customer, defining the level of service, performance, and availability. It typically includes metrics such as uptime, response time, and resolution time. SLAs are used to ensure that service providers meet the expectations of their customers and to provide a clear understanding of the service quality.

**NEW QUESTION: 12**

CSA (Cloud Security Alliance) is a global organization dedicated to promoting the security of cloud computing. It provides research, standards, and best practices for cloud security. The Notorious Nine is a group of security researchers who have identified and reported vulnerabilities in various cloud services.

CSA is a non-profit organization that focuses on cloud security. It provides a variety of services, including research, standards, and best practices. API is a set of protocols and tools for building and integrating software applications. It allows different software applications to communicate with each other.

- A. API is a set of protocols and tools for building and integrating software applications.
- B. API is a set of protocols and tools for building and integrating software applications.
- C. API is a set of protocols and tools for building and integrating software applications.
- D. API is a set of protocols and tools for building and integrating software applications.

Answer: C (LEAVE A REPLY)

**NEW QUESTION: 13**

Data Loss Prevention (DLP) is a security technology that monitors and controls data transfers between systems. It helps organizations protect sensitive information from being lost or leaked. DLP can be used to identify and prevent data loss, theft, and misuse.

- A.
- B.
- C.
- D.

Answer: B (LEAVE A REPLY)

Cloud Security Alliance (CSA) is a global organization dedicated to promoting the security of cloud computing. It provides research, standards, and best practices for cloud security. The Notorious Nine is a group of security researchers who have identified and reported vulnerabilities in various cloud services. CSA is a non-profit organization that focuses on cloud security. It provides a variety of services, including research, standards, and best practices. API is a set of protocols and tools for building and integrating software applications. It allows different software applications to communicate with each other.

**NEW QUESTION: 14**

IPSec is a protocol suite for securing Internet Protocol (IP) communications by authenticating and encrypting each IP packet in a communication session. It is used to secure data over networks, including the Internet. VPN is a secure, encrypted tunnel between two devices over a network. It allows users to access private networks and resources over a public network.

- A. IPSec
- B. VPN
- C. SSL

D. TLS

Answer: A (LEAVE A REPLY)

IPSec is a protocol suite for securing IP communications by authenticating and encrypting each IP packet in a communication between two computers. It is used to protect the confidentiality and integrity of data transmitted over IP networks. TLS is a cryptographic protocol designed to provide communications security over a computer network. It is used to protect the confidentiality and integrity of data transmitted over a network. VPN is a technology that allows a user to establish a secure connection to a private network over a public network. It is used to protect the confidentiality and integrity of data transmitted over a network.

NEW QUESTION: 15

Which of the following is a cloud service model? PaaS is a cloud service model that allows users to create and run applications on a cloud platform. IaaS is a cloud service model that allows users to rent virtual machines and storage. SaaS is a cloud service model that allows users to use software applications over the internet. FaaS is a cloud service model that allows users to run code in response to events without the need for servers.

Answer:

- A. IaaS
- B. PaaS
- C. SaaS
- D. FaaS

Answer: D (LEAVE A REPLY)

NEW QUESTION: 16

Which of the following is a cloud service model?

- A. IaaS
- B. PaaS
- C. SaaS
- D. FaaS

Answer: D (LEAVE A REPLY)

Answer:

Which of the following is a cloud service model? PaaS is a cloud service model that allows users to create and run applications on a cloud platform. IaaS is a cloud service model that allows users to rent virtual machines and storage. SaaS is a cloud service model that allows users to use software applications over the internet. FaaS is a cloud service model that allows users to run code in response to events without the need for servers.

**NEW QUESTION: 24**

Which of the following is a secure communication protocol?

- A. IPSec
- B. VPN
- C. SSL
- D. TLS

**Answer: A (LEAVE A REPLY)**

IPSec:

VPN:

IPSec is a protocol suite for securing Internet Protocol (IP) communications by ensuring confidentiality, integrity, and authentication. It is commonly used to create Virtual Private Networks (VPNs). VPN is a technology that allows users to connect to a private network over a public network, such as the Internet. SSL and TLS are protocols for secure communication over the Internet. TLS is a more secure version of SSL. HTTPS is a secure version of HTTP that uses TLS for encryption. VPN is a secure way to connect to a private network over a public network.

**NEW QUESTION: 25**

Which of the following is a secure communication protocol?

- A. SSH
- B. SFTP
- C. SCP
- D. SMC

**Answer: A (LEAVE A REPLY)**

SSH is a secure protocol for logging into another computer or executing commands over a network. SFTP is a secure file transfer protocol. SCP is a secure copy protocol. SMC is a secure management protocol.

Answer: A ([LEAVE A REPLY](#))

Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort. Cloud computing is characterized by shared pools of configurable resources that are dynamically assigned and reconfigured according to user requirements. Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort.

**NEW QUESTION: 36**

DRM (Digital Rights Management) is a technology used to control access to digital content. Which of the following is NOT a characteristic of DRM?

- A. Prevents copying
- B. Prevents distribution
- C. Prevents modification
- D. Prevents deletion

Answer: A ([LEAVE A REPLY](#))

DRM is a technology used to control access to digital content. It is used to prevent unauthorized copying, distribution, and modification of digital content. DRM is not used to prevent deletion of digital content.

**NEW QUESTION: 37**

Which of the following is NOT a characteristic of cloud computing?

- A. Scalability
- B. Elasticity
- C. On-demand self-service
- D. Limited access to data

Answer: C ([LEAVE A REPLY](#))

Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort. Cloud computing is characterized by shared pools of configurable resources that are dynamically assigned and reconfigured according to user requirements. Cloud computing is not limited to on-demand self-service.

**NEW QUESTION: 38**

DLP (Data Loss Prevention) is a technology used to prevent data from being lost or leaked. Which of the following is NOT a characteristic of DLP?

- A. Prevents data loss
- B. Prevents data leakage
- C. Prevents data theft
- D. Prevents data deletion

Answer: D ([LEAVE A REPLY](#))

DLP is a technology used to prevent data from being lost or leaked. It is used to prevent unauthorized copying, distribution, and modification of digital content. DLP is not used to prevent deletion of digital content. DLP is used to prevent data loss, data leakage, and data theft.

**NEW QUESTION: 151**

Which of the following protocols is used to protect DNS traffic?  
A. IPsec  
B. HTTPS  
C. VPN  
D. DNSSEC

A. IPsec

B. HTTPS

C. VPN

D. DNSSEC

**Answer: D (LEAVE A REPLY)**

DNSSEC is a protocol that is used to protect DNS traffic. It is a security extension to the DNS protocol that provides authentication and integrity for DNS data. It is used to prevent DNS spoofing and cache poisoning attacks. HTTPS is a protocol that is used to protect web traffic. It is a secure version of HTTP that uses SSL/TLS for encryption. VPN is a protocol that is used to create a secure tunnel between two devices. IPsec is a protocol that is used to protect IP traffic. It is a suite of protocols that provide authentication, confidentiality, and integrity for IP traffic.

IPsec is a protocol that is used to protect IP traffic. It is a suite of protocols that provide authentication, confidentiality, and integrity for IP traffic.

VPN is a protocol that is used to create a secure tunnel between two devices. It is a secure version of a network protocol that is used to connect two devices over a public network. IPsec is a protocol that is used to protect IP traffic. It is a suite of protocols that provide authentication, confidentiality, and integrity for IP traffic.

**NEW QUESTION: 152**

Which of the following protocols is used for federated identity management?  
A. XML  
B. HTML  
C. WS-Federation  
D. SAML

A. XML

B. HTML

C. WS-Federation

D. SAML

**Answer: D (LEAVE A REPLY)**

□□

SAML (Security Assertion Markup Language) is a protocol that is used for federated identity management. It is a standard for exchanging authentication and authorization data between parties, in particular between a service provider and a relying party. ADFS (Active Directory Federation Services) is a service that is used to provide federated identity management. WS-Federation is a protocol that is used for federated identity management. XML is a markup language that is used for data interchange. HTML is a markup language that is used for web pages.

XML is a markup language that is used for data interchange. SAML is a protocol that is used for federated identity management. WS-Federation is a protocol that is used for federated identity management. HTML is a markup language that is used for web pages.

**NEW QUESTION: 197**

Which of the following is the most common range for the percentage of energy used for heating in a typical office building?  
Which of the following is the most common range for the percentage of energy used for heating in a typical office building?  
Which of the following is the most common range for the percentage of energy used for heating in a typical office building?

- A. 20~40%
- B. 50~75%
- C. 40~60%
- D. 30~50%

**Answer: (SHOW ANSWER)**

According to ASHRAE, the most common range for the percentage of energy used for heating in a typical office building is 40% to 60%. This is because ASHRAE 90.1-2010 requires that the heating system be designed to meet the peak heating load, which is typically 40% to 60% of the total energy used for heating.

**NEW QUESTION: 198**

Which of the following is the most common range for the percentage of energy used for heating in a typical office building?  
Which of the following is the most common range for the percentage of energy used for heating in a typical office building?  
Which of the following is the most common range for the percentage of energy used for heating in a typical office building?

- A. 20~40%
- B. 50~75%
- C. 40~60%
- D. 30~50%

**Answer: D (LEAVE A REPLY)**

CSRF (Cross-Site Request Forgery) is a security vulnerability that allows an attacker to perform actions on behalf of a user without their consent. This is achieved by tricking the user into submitting a request to a web application that the user is not aware of. The attacker can then use the user's session to perform actions that they are not authorized to do. This is a common attack vector for web applications that do not properly validate the user's identity and permissions.

□□□ BCDR □□□ □□□□ □□ □□□□ □□□ □□□ □ □□ □ □□ □ □□□□  
 □□□□□?

- A. □□ □□□
- B. □□□ □□
- C. □□□
- D. □□

**Answer: D (LEAVE A REPLY)**

BCDR is a type of data center architecture that is designed to be highly available and resilient. It consists of multiple data centers that are geographically dispersed and interconnected. This architecture allows for data replication and distribution across multiple sites, ensuring that data is available even in the event of a disaster or outage. BCDR is often used in industries where data availability is critical, such as finance, healthcare, and government.

**NEW QUESTION: 208**

Which of the following is a characteristic of a cloud-based service?

- A. On-premises
- B. Scalable
- C. Limited access
- D. High latency

**Answer: C (LEAVE A REPLY)**

Cloud-based services are characterized by their ability to be accessed over the internet and their scalability. They are typically hosted on remote servers and can be accessed from anywhere at any time. Cloud services are often used for applications that require high availability and scalability, such as web applications and data storage. However, cloud services can also have limitations, such as limited access to data and potential security concerns.

**NEW QUESTION: 209**

Which of the following is a standard for information security management systems (ISMS)?

- A. ISO/IEC 27001
- B. ISO/IEC 19889
- C. ISO/IEC 27001:2015
- D. ISO/IEC 27018

**Answer: D (LEAVE A REPLY)**

ISO/IEC 27018 is a standard for privacy protection in cloud computing. It provides a framework for organizations to protect personal data in the cloud. ISO/IEC 27001 is a standard for information security management systems (ISMS). ISO/IEC 27001:2015 is the latest version of the standard. ISO/IEC 19889 is a standard for information security management systems (ISMS) for small and medium-sized enterprises.

**NEW QUESTION: 210**

Which of the following is a characteristic of a cloud-based service? (Select two)

- A. Scalable
B. Configurable
C. Portable
D. Immutable

Answer: A (LEAVE A REPLY)

Cloud-based services are characterized by being scalable, configurable, and portable. Scalability refers to the ability to increase or decrease resources as needed. Configuration refers to the ability to customize services to meet specific needs. Portability refers to the ability to move services between different cloud providers.

NEW QUESTION: 211

Which of the following is a characteristic of IaaS? (Select two)

- A. The customer manages the OS, applications, and data.
B. The customer manages the OS, applications, and data.
C. The customer manages the OS, applications, and data.
D. The customer manages the OS, applications, and data.

Answer: A (LEAVE A REPLY)

IaaS (Infrastructure as a Service) is a cloud service model where the customer manages the OS, applications, and data. The cloud provider is responsible for the underlying infrastructure, including the hardware and network. This model allows customers to focus on their business logic and data while the provider handles the physical infrastructure.

**NEW QUESTION: 324**

Which of the following is a characteristic of Infrastructure as a Service (IaaS)?

- A. The user manages the hardware and software.
- B. The user manages the operating system, applications, and data.
- C. The user manages the hardware and operating system.
- D. The user manages the hardware, operating system, and applications.

Answer: B ([LEAVE A REPLY](#))

Infrastructure as a Service (IaaS) is a cloud computing model where the provider manages the hardware and operating system, while the user manages the applications, data, and operating system. This model allows users to rent virtual machines, storage, and networks. In contrast, Software as a Service (SaaS) involves the provider managing all aspects of the application, while the user only manages their data. Platform as a Service (PaaS) involves the provider managing the hardware and operating system, while the user manages the applications and data. Hybrid cloud involves using a mix of on-premises and cloud resources.

**NEW QUESTION: 325**

Which of the following is a type of Security of Concern (SOC)?

- A. SOC 3
- B. SAS-70
- C. SOC 2
- D. SOC 1

Answer: A ([LEAVE A REPLY](#))

**NEW QUESTION: 326**

Which of the following is a type of Security of Concern (SOC)?

- A. SOC 3
- B. SAS-70
- C. SOC 2
- D. SOC 1

Answer: ([SHOW ANSWER](#))

Security of Concern (SOC) refers to a specific area of concern in an organization's security posture. SOC 1 is designed for service organizations, SOC 2 is for organizations that handle sensitive data, and SOC 3 is for general business operations. SAS-70 is a standard for service organizations that handle sensitive data.

**NEW QUESTION: 354**

Which of the following is a common method for securing data in transit?  
A. Encryption

A. Encryption

B. Hashing

C. Compression

D. Authentication

Answer: (SHOW ANSWER)

Encryption is a process of converting data into a form that cannot be understood by anyone intercepting it. Hashing is a process of converting data into a fixed-length string of characters. Compression is a process of reducing the size of data. Authentication is a process of verifying the identity of a user or system.

**NEW QUESTION: 355**

Which of the following is a common method for protecting Personally Identifiable Information (PII) in a database?  
A. Encryption

A. Encryption

B. Hashing

C. Masking

D. Anonymization

Answer: (SHOW ANSWER)

Encryption is a process of converting data into a form that cannot be understood by anyone intercepting it. Hashing is a process of converting data into a fixed-length string of characters. Masking is a process of replacing sensitive data with a placeholder. Anonymization is a process of removing all personally identifiable information from a dataset.

**NEW QUESTION: 373**

Which of the following is a common method for securing a network? (Select two)

- A. Firewall
- B. VPN
- C. Encryption
- D. Antivirus

Answer: (SHOW ANSWER)

Firewalls and VPNs are common methods for securing a network. Firewalls act as a barrier between a trusted internal network and an untrusted external network, such as the Internet. They monitor and control incoming and outgoing network traffic based on predetermined security rules. VPNs, or Virtual Private Networks, allow users to connect to a private network over a public network, such as the Internet. This is done by creating a secure, encrypted tunnel between the user's device and the private network. Encryption is another common method for securing data. It involves converting plain text into a coded format that can only be read by the intended recipient. Antivirus software is used to detect, prevent, and remove malware, but it is not a primary method for securing a network.

**NEW QUESTION: 374**

Which of the following is a secure protocol for transmitting sensitive information over a network? (Select one)

- A. VPN
- B. TLS
- C. DNSSEC
- D. HTTPS

Answer: C (LEAVE A REPLY)

DNSSEC is a secure protocol for transmitting sensitive information over a network. It is used to protect the integrity and authenticity of DNS data. HTTPS is a secure protocol for transmitting sensitive information over a network. It is used to protect the confidentiality and integrity of data transmitted over the Internet. TLS is a secure protocol for transmitting sensitive information over a network. It is used to protect the confidentiality and integrity of data transmitted over a network. VPN is a secure protocol for transmitting sensitive information over a network. It is used to protect the confidentiality and integrity of data transmitted over a network.

**NEW QUESTION: 375**

Which of the following is a common method for securing a network? (Select two)

- A. Firewall
- B. VPN
- C. Encryption
- D. Antivirus

Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort. Cloud computing is characterized by shared pools of configurable resources that are dynamically assigned and reconfigured according to user requirements. Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort. Cloud computing is characterized by shared pools of configurable resources that are dynamically assigned and reconfigured according to user requirements.

**NEW QUESTION: 413**

Which of the following is a key characteristic of a Service Level Agreement (SLA)?

- A. It is a contract between a customer and a service provider.
- B. SLA
- C. It is a document that defines the performance of a service.
- D. It is a document that defines the terms of a service.

**Answer: B (LEAVE A REPLY)**

00/00:  
00:

Service Level Agreement (SLA) is a contract between a customer and a service provider. It is a document that defines the performance of a service. SLA is a document that defines the terms of a service. SLA is a document that defines the performance of a service. SLA is a document that defines the terms of a service. SLA is a document that defines the performance of a service. SLA is a document that defines the terms of a service.

**NEW QUESTION: 414**

PaaS (Platform as a Service) is a cloud computing model that provides a platform for customers to develop, run, and manage their applications without the need to build and maintain the underlying infrastructure.

- A. It is a cloud computing model that provides a platform for customers to develop, run, and manage their applications without the need to build and maintain the underlying infrastructure.
- B. It is a cloud computing model that provides a platform for customers to develop, run, and manage their applications without the need to build and maintain the underlying infrastructure.
- C. It is a cloud computing model that provides a platform for customers to develop, run, and manage their applications without the need to build and maintain the underlying infrastructure.

BCDR (Business Continuity and Disaster Recovery) is a process that helps organizations prepare for, respond to, and recover from various types of disasters. It involves creating a plan that outlines the steps to be taken in the event of a disaster, such as a natural disaster, a cyber attack, or a power outage. The plan should include information about the organization's critical assets, the roles and responsibilities of key personnel, and the procedures for restoring operations. BCDR is an essential part of any organization's risk management strategy.

**NEW QUESTION: 436**

BCDR (Business Continuity and Disaster Recovery) is a process that helps organizations prepare for, respond to, and recover from various types of disasters. It involves creating a plan that outlines the steps to be taken in the event of a disaster, such as a natural disaster, a cyber attack, or a power outage. The plan should include information about the organization's critical assets, the roles and responsibilities of key personnel, and the procedures for restoring operations. BCDR is an essential part of any organization's risk management strategy.

BCDR (Business Continuity and Disaster Recovery) is a process that helps organizations prepare for, respond to, and recover from various types of disasters. It involves creating a plan that outlines the steps to be taken in the event of a disaster, such as a natural disaster, a cyber attack, or a power outage. The plan should include information about the organization's critical assets, the roles and responsibilities of key personnel, and the procedures for restoring operations. BCDR is an essential part of any organization's risk management strategy.

- A. SRE
- B. RPO
- C. RSL
- D. RTO

**Answer: B (LEAVE A REPLY)**

RPO (Recovery Point Objective) is the maximum acceptable amount of data loss measured in time. It is the point in time to which data must be recovered after a disaster. RPO is determined by the organization's tolerance for data loss and the criticality of the data. A shorter RPO indicates a higher tolerance for data loss.

RTO (Recovery Time Objective) is the maximum acceptable amount of downtime measured in time. It is the time from the start of a disaster to the point at which the organization's operations are restored. RTO is determined by the organization's tolerance for downtime and the criticality of the operations. A shorter RTO indicates a higher tolerance for downtime.

RPO (Recovery Point Objective) is the maximum acceptable amount of data loss measured in time. It is the point in time to which data must be recovered after a disaster. RPO is determined by the organization's tolerance for data loss and the criticality of the data. A shorter RPO indicates a higher tolerance for data loss.

RTO (Recovery Time Objective) is the maximum acceptable amount of downtime measured in time. It is the time from the start of a disaster to the point at which the organization's operations are restored. RTO is determined by the organization's tolerance for downtime and the criticality of the operations. A shorter RTO indicates a higher tolerance for downtime.

SRE (Service Recovery Effort) is the total effort required to restore service after a disaster. It is the sum of the RPO and RTO. SRE is determined by the organization's tolerance for data loss and downtime, and the criticality of the data and operations. A shorter SRE indicates a higher tolerance for data loss and downtime.

Which of the following is the year when the EU Directive 95/46 EC was adopted?

- A. 2010
- B. 2000
- C. 1995
- D. 1990

Answer: ([SHOW ANSWER](#))

10/10:

10:

1995 is the year when Directive 95/46 EC was adopted. This directive is the first EU law on data protection. It was adopted in 1995 and came into force in 1996. It replaced the 1981 Directive and was replaced by the 2002 Directive. It was adopted by the Council of the European Union on 24 October 1995.

**NEW QUESTION: 577**

Which of the following is a key benefit of using ITIL? (Select two)

- A. Reduces costs
- B. Improves service quality
- C. Increases customer satisfaction
- D. Reduces risk

Answer: D (LEAVE A REPLY)

Correct

ITIL is a framework of best practices for IT service management (ITSM) that focuses on aligning IT services with the needs of business. It provides a common language and a set of processes for ITSM, which can be used to improve the quality of IT services and reduce the risk of IT service failure. ITIL is based on the ITIL framework, which is a set of best practices for ITSM. The ITIL framework is based on the ITIL framework, which is a set of best practices for ITSM. The ITIL framework is based on the ITIL framework, which is a set of best practices for ITSM.

**NEW QUESTION: 578**

Which of the following is a key benefit of using TLS? (Select two)

- A. Confidentiality
- B. Integrity
- C. Availability
- D. Non-repudiation

Answer: (SHOW ANSWER)

Correct

TLS (Transport Layer Security) is a cryptographic protocol that provides confidentiality, integrity, and authentication for data transmitted over a network. It is used to secure communications between a client and a server, such as in a web browser connection. TLS is based on the TLS framework, which is a set of best practices for TLS. The TLS framework is based on the TLS framework, which is a set of best practices for TLS.
