Options:

A. Scalability B. Flexibility C. Cost-effectiveness D. Security

NEW QUESTION: 54

Which of the following is NOT a benefit of PaaS? (Select one)

- A. Scalability B. Flexibility C. Cost-effectiveness D. Security

Answer: C (LEAVE A REPLY)

Options:

- Scalability: PaaS allows you to scale your applications up or down as needed. This is a key benefit of PaaS. CSPs like AWS, Azure, and Google Cloud offer scalable PaaS services.

- Flexibility: PaaS allows you to choose from a variety of programming languages, frameworks, and tools. This flexibility is a key benefit of PaaS.

- Cost-effectiveness: PaaS can be more cost-effective than other cloud models because you only pay for what you use. However, this is not always the case, especially for long-term or high-volume usage.

Answer: C (LEAVE A REPLY)

NEW QUESTION: 70

GDPR(GDPR) is a regulation that governs the collection, processing, and storage of personal data. It is typically implemented using various legal and technical measures.

- A. 2010
- B. 2000
- C. 1995
- D. 1990

Answer: C (LEAVE A REPLY)

□□/□□:

□□:

1995 Directive 95/46 EC is a data protection law. It is a European Union law that aims to protect the privacy and personal data of individuals. It is a legal framework that sets out the rights of individuals and the obligations of data controllers. It is a law that is implemented in all EU member states. It is a law that is designed to protect the personal data of individuals from being misused. It is a law that is designed to ensure that personal data is processed lawfully, fairly, and transparently. It is a law that is designed to ensure that personal data is kept secure and protected against unauthorized access, disclosure, or destruction. It is a law that is designed to ensure that personal data is not retained for longer than is necessary for the purposes for which it was collected. It is a law that is designed to ensure that individuals have the right to access their personal data and to have it corrected or deleted. It is a law that is designed to ensure that individuals have the right to object to the processing of their personal data. It is a law that is designed to ensure that individuals have the right to have their personal data transferred to another controller. It is a law that is designed to ensure that individuals have the right to have their personal data deleted. It is a law that is designed to ensure that individuals have the right to have their personal data anonymized. It is a law that is designed to ensure that individuals have the right to have their personal data ported to another controller. It is a law that is designed to ensure that individuals have the right to have their personal data deleted. It is a law that is designed to ensure that individuals have the right to have their personal data anonymized. It is a law that is designed to ensure that individuals have the right to have their personal data ported to another controller.

NEW QUESTION: 71

Which of the following is a security standard?

Answer:

- A. FIPS 140-2
- B. NIST SP 800-53
- C. ISO/IEC 27001
- D. PCI DSS

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 72

Which of the following is a security standard?

- A. ISO 27001
- B. NIST SP 800-53
- C. PCI DSS
- D. FIPS 140-2

Answer: A ([LEAVE A REPLY](#))

Answer:

Answer:

On September 1, 2015, the Federal Reserve issued a final rule under the Electronic Fund Transfer Act (EFTA) regarding the liability of consumers for unauthorized transactions. The rule, known as Reg E, sets out the liability limits for consumers. Under Reg E, consumers are generally liable for unauthorized transactions up to \$50, and up to \$500 if they report the loss or theft of the card within 60 days of the transaction. If the consumer reports the loss or theft of the card within 2 business days, their liability is limited to \$50. If the consumer reports the loss or theft of the card within 60 days, their liability is limited to \$500. If the consumer reports the loss or theft of the card after 60 days, they are liable for the full amount of the unauthorized transaction. The rule also sets out the requirements for financial institutions to provide consumers with a statement of account that includes the amount and date of each unauthorized transaction. Financial institutions are required to provide this statement to consumers within 90 days of the end of the billing cycle. The rule also sets out the requirements for financial institutions to provide consumers with a statement of account that includes the amount and date of each unauthorized transaction. Financial institutions are required to provide this statement to consumers within 90 days of the end of the billing cycle.

NEW QUESTION: 73

NEW QUESTION: 106

Which of the following is a key benefit of ITIL? (Select two)

- A. Reduces risk
- B. Improves service quality
- C. Reduces costs
- D. Increases customer satisfaction

Answer: D (LEAVE A REPLY)

ITIL is a framework of best practices for IT service management (ITSM) that focuses on aligning IT services with the needs of business. It provides a common language and a set of processes for ITSM, which can be used to design, deliver, and improve IT services. ITIL is based on the principle of continual improvement and is designed to be flexible and adaptable to different organizations and environments. The ITIL framework is organized into five stages: Service Strategy, Service Design, Service Transition, Service Operation, and Continual Improvement. Each stage contains a set of processes that are designed to work together to achieve the organization's goals. ITIL is a widely recognized and used framework for ITSM, and it is the foundation for many other ITSM frameworks.

NEW QUESTION: 134

Which of the following is the most appropriate method for securing a wireless network?

- A. WEP
- B. WPA
- C. WPA2
- D. WPA3

Answer: D (LEAVE A REPLY)

Explanation:

Answer:

WPA3 is the most secure wireless security protocol. WPA3 provides the highest level of security for wireless networks. WPA3 uses a stronger encryption algorithm and a more secure key management process. WPA3 also provides protection against brute force attacks. WPA3 is the most appropriate method for securing a wireless network.

NEW QUESTION: 135

Which of the following is the most appropriate method for securing a network?

NEW QUESTION: 214

Which of the following is a benefit of BCDR?

- A. Reduces the risk of data loss
- B. Reduces the risk of data corruption
- C. Reduces the risk of data theft
- D. Reduces the risk of data breach

Answer: (SHOW ANSWER)

Correct Answer: A

Explanation:

Business Continuity and Disaster Recovery (BCDR) is a process that helps organizations prepare for, respond to, and recover from a wide range of potential disasters. BCDR is a critical component of an organization's risk management strategy. BCDR helps organizations to minimize the impact of a disaster and to get back up and running as quickly as possible. BCDR also helps organizations to protect their data and to ensure that their operations are resilient to a wide range of potential threats.

NEW QUESTION: 215

Which of the following is a benefit of eDiscovery?

- A. Reduces the cost of litigation
- B. Reduces the risk of data loss
- C. Reduces the risk of data corruption
- D. Reduces the risk of data theft

Answer: C (LEAVE A REPLY)

Correct Answer: C

eDiscovery is a process that helps organizations to identify, collect, and preserve electronic data for use in litigation. eDiscovery is a critical component of an organization's risk management strategy. eDiscovery helps organizations to reduce the cost of litigation and to ensure that they have all the data they need to defend themselves in court. eDiscovery also helps organizations to reduce the risk of data loss and to ensure that their data is secure.

NEW QUESTION: 216

Which of the following is a benefit of a cloud-based IT environment?

Cloud-based IT environments offer a number of benefits, including:

• Reduced costs

- A. Increased security
- B. Increased flexibility
- C. Increased scalability
- D. Increased reliability

Answer: D (LEAVE A REPLY)

Correct Answer: D

Explanation:

Cloud-based IT environments offer a number of benefits, including increased security, increased flexibility, increased scalability, and increased reliability. Cloud-based IT environments are more secure than on-premise IT environments because they are hosted in data centers that are protected by multiple layers of security. Cloud-based IT environments are also more flexible because they can be scaled up or down as needed. Cloud-based IT environments are also more scalable because they can handle a large volume of data and users. Finally, cloud-based IT environments are more reliable because they are hosted in multiple data centers, which ensures that data is always available.

NEW QUESTION: 259

Which of the following is a characteristic of a cloud-based storage service?

- A. Data is stored on a local server.
- B. Data is stored on a remote server.
- C. Data is stored on a physical server.
- D. Data is stored on a virtual server.

Answer: (SHOW ANSWER)

□□

Cloud-based storage services store data on remote servers, making it accessible from anywhere. This is different from local storage, which is only accessible from the device it is stored on. Cloud storage also offers scalability and redundancy.

NEW QUESTION: 260

Which of the following is a type of malware that can be used to steal sensitive information?

- A. Trojan horse
- B. DLP
- C. Keylogger
- D. SIM, SEIM, SEM

Answer: C (LEAVE A REPLY)

□□

□□:

Keyloggers are a type of malware that can be used to steal sensitive information by recording every keystroke made on a computer. They can be used to steal passwords, credit card numbers, and other sensitive data.

NEW QUESTION: 261

Which of the following is a cloud-based service that provides infrastructure as a service (IaaS)?

- A. Amazon EC2
- B. CaaS
- C. PaaS
- D. SaaS

Answer: A (LEAVE A REPLY)

IaaS is a cloud-based service that provides infrastructure as a service. It allows users to rent virtual machines, storage, and other infrastructure resources from a cloud provider. Amazon EC2 is an example of IaaS.

- C. <IPSec>
- D. <security-policy-set>

Answer: D ([LEAVE A REPLY](#))

00

XML defines XML security policies. The <security-policy-set> element is used to define a security policy. XML defines XML security policies. XML defines XML security policies. XML defines XML security policies. XML defines XML security policies. XML defines XML security policies. XML defines XML security policies. XML defines XML security policies. XML defines XML security policies. XML defines XML security policies.

NEW QUESTION: 291

Which of the following is a cloud service model?

- A. Infrastructure as a Service
- B. Software as a Service
- C. Platform as a Service
- D. Network as a Service

Answer: ([SHOW ANSWER](#))

Cloud service models include Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). IaaS provides virtualized computing resources over the Internet. PaaS provides a platform allowing customers to develop, run, and manage their applications without dealing with the underlying infrastructure. SaaS provides software applications that are hosted on a remote server and are accessed over the Internet.

NEW QUESTION: 292

Which of the following is a type of control?

- A. SOC 1 Type 2
- B. SOC 2 Type 2
- C. SOC 3
- D. SOC 1 Type 1

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 293

Which of the following is a cloud service model that provides the ability to run applications on a cloud infrastructure without the need to manage the underlying hardware?

A. Infrastructure as a Service (IaaS)
B. Platform as a Service (PaaS)
C. Software as a Service (SaaS)
D. Data as a Service (DaaS)

Answer:

- A. PaaS
- B. IaaS
- C. IaaS
- D. SaaS

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 294

Which of the following is a cloud service model that provides the ability to run applications on a cloud infrastructure without the need to manage the underlying hardware?

- A. IaaS/VPN

NEW QUESTION: 315

SaaS is a model for software distribution where the software is hosted on a remote server and accessed over the internet.

- A. Software is installed on the user's device and accessed over the internet. This model is known as IaaS (Infrastructure as a Service). It allows users to rent infrastructure resources such as servers, storage, and networking from a provider. Users are responsible for installing and managing the software on the infrastructure.
- B. Software is hosted on a remote server and accessed over the internet. This model is known as SaaS (Software as a Service). It allows users to access software applications over the internet without the need to install anything on their device. The provider is responsible for hosting, maintaining, and updating the software.
- C. Software is installed on the user's device and accessed over the internet. This model is known as PaaS (Platform as a Service). It allows users to rent a platform for developing, running, and managing applications. The provider is responsible for the underlying infrastructure and the platform itself.

NEW QUESTION: 323

Which of the following is a characteristic of a REST API?
REST APIs are stateless.

- A. REST APIs are stateful.
- B. REST APIs are stateless.
- C. REST APIs are stateful and stateless.
- D. REST APIs are stateful and stateless.

Answer: C (LEAVE A REPLY)

00/00:

00:

REST APIs are stateless, meaning that the server does not store any information about the client's previous requests. This is in contrast to stateful APIs, which maintain state between requests. REST APIs are also stateful, meaning that the client maintains state between requests. This is in contrast to stateless APIs, which do not maintain state between requests. REST APIs are also stateful and stateless, meaning that they maintain state between requests and do not maintain state between requests.

REST APIs are stateful, meaning that the server maintains state between requests. This is in contrast to stateless APIs, which do not maintain state between requests. REST APIs are also stateful and stateless, meaning that they maintain state between requests and do not maintain state between requests.

NEW QUESTION: 324

REST API is a stateless protocol. Which of the following is a characteristic of a REST API?
REST APIs are stateless.

REST API is a stateless protocol. Which of the following is a characteristic of a REST API?

- A. HTTP
- B. SSH
- C. SAML
- D. XML

Answer: A (LEAVE A REPLY)

REST(Representational State Transfer) is a stateless protocol. HTTP is a stateful protocol. XML(Extensible Markup Language) is a stateful protocol. SAML(Security Assertion Markup Language) is a stateful protocol. XML is a stateful protocol. SSH(Secure Shell) is a stateful protocol. REST APIs are stateless.

NEW QUESTION: 325

Which of the following is a characteristic of a REST API?
REST APIs are stateless.

- A. REST APIs are stateful.

- B. 10000
- C. 1000
- D. 100000

NEW QUESTION: 335

BCDR is a type of _____ that is used to store data in a distributed manner. _____?

- A. NoSQL
- B. Relational Database
- C. SQL
- D. Data Warehouse

Answer: A (LEAVE A REPLY)

BCDR is a type of NoSQL that is used to store data in a distributed manner. It is a type of database that is used to store data in a distributed manner. It is a type of database that is used to store data in a distributed manner. It is a type of database that is used to store data in a distributed manner. It is a type of database that is used to store data in a distributed manner.

NEW QUESTION: 336

HIDS is a type of _____ that is used to monitor network traffic for signs of intrusion. _____?

- A. NoSQL
- B. Relational Database
- C. SQL
- D. Data Warehouse

Answer: (SHOW ANSWER)

HIDS is a type of Intrusion Detection System (IDS) that is used to monitor network traffic for signs of intrusion. It is a type of IDS that is used to monitor network traffic for signs of intrusion. It is a type of IDS that is used to monitor network traffic for signs of intrusion. It is a type of IDS that is used to monitor network traffic for signs of intrusion.

NEW QUESTION: 337

_____ is a type of _____ that is used to store data in a distributed manner. _____?

- A. NoSQL
- B. Relational Database
- C. CDN
- D. Data Warehouse

Answer: C (LEAVE A REPLY)

NEW QUESTION: 338

TLS _____ is a type of _____ that is used to secure data in transit. _____.

- A. NoSQL, Relational Database
- B. Relational Database, NoSQL

C. 10, 100

D. 100 100 100, 1000

Answer: (SHOW ANSWER)

NEW QUESTION: 339

Which of the following is NOT a characteristic of cloud computing? (1) On-demand self-service (2) Broad network access (3) Multi-tenancy (4) Resource pooling. Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort.

Which of the following is NOT a characteristic of cloud computing? (1) On-demand self-service (2) Broad network access (3) Multi-tenancy (4) Resource pooling. Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort.

A. On-demand self-service

B. Broad network access

C. Multi-tenancy

D. Resource pooling

Answer: (SHOW ANSWER)

NEW QUESTION: 340

Which of the following is NOT a type of data loss prevention (DLP) technology? (1) Network DLP (2) Endpoint DLP (3) Cloud DLP (4) Storage DLP. Data loss prevention (DLP) is a security process that monitors and controls the transfer of sensitive information out of an organization's network.

A. Network DLP

B. DLP

C. Cloud DLP

D. SIM, SEIM, SEM

Answer: C (LEAVE A REPLY)

10

Which of the following is NOT a type of data loss prevention (DLP) technology? (1) Network DLP (2) Endpoint DLP (3) Cloud DLP (4) Storage DLP. Data loss prevention (DLP) is a security process that monitors and controls the transfer of sensitive information out of an organization's network.

NEW QUESTION: 341

Which of the following is NOT a type of data loss prevention (DLP) technology? (1) Network DLP (2) Endpoint DLP (3) Cloud DLP (4) Storage DLP. Data loss prevention (DLP) is a security process that monitors and controls the transfer of sensitive information out of an organization's network.

A. Network DLP

B. DLP

C. Cloud DLP

D. SIM, SEIM, SEM

Answer: (SHOW ANSWER)

10

Which of the following is NOT a type of data loss prevention (DLP) technology? (1) Network DLP (2) Endpoint DLP (3) Cloud DLP (4) Storage DLP. Data loss prevention (DLP) is a security process that monitors and controls the transfer of sensitive information out of an organization's network.

NEW QUESTION: 345

Which ID type is used for SAML authentication?

- A. XML
- B. HTML
- C. WS-Federation
- D. SAML

Answer: D (LEAVE A REPLY)

SAML (Security Assertion Markup Language) is an ID type used for authentication. ADFS (Active Directory Federation Services) uses WS-Federation for authentication. SAML is used for authentication in a federated environment. XML is used for data exchange, HTML is used for web pages, and WS-Federation is used for authentication in a federated environment.

NEW QUESTION: 346

Which of the following is a valid IP address?

- A. 192.168.1.1
- B. 192.168.1
- C. 192.168
- D. 192.168

Answer: D (LEAVE A REPLY)

192.168.1.1 is a valid IP address. 192.168.1 is not a valid IP address because it is missing the last octet. 192.168 is not a valid IP address because it is missing the last two octets. 192.168 is not a valid IP address because it is missing the last two octets.

NEW QUESTION: 363

Which of the following is a type of network-based intrusion detection system (NIDS)?

- A. Host-based intrusion detection system (HIDS)
- B. Signature-based intrusion detection system (SIDS)
- C. Anomaly-based intrusion detection system (AIDS)
- D. Network-based intrusion detection system (NIDS)

Answer: C ([LEAVE A REPLY](#))

Network-based intrusion detection systems (NIDS) monitor network traffic for suspicious activity. They are typically installed at network choke points and can detect attacks that affect multiple hosts. Host-based intrusion detection systems (HIDS) monitor activity on individual hosts. Signature-based intrusion detection systems (SIDS) detect attacks based on known signatures. Anomaly-based intrusion detection systems (AIDS) detect attacks based on deviations from normal behavior.

NEW QUESTION: 364

Brewer-Nash is a type of access control model used in government systems. Which of the following is a characteristic of Brewer-Nash?

- A. It is based on the principle of least privilege.
- B. It is based on the principle of separation of duties.
- C. RBAC
- D. It is based on the principle of need-to-know.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 365

Which of the following is a type of web application firewall (WAF)?

- A. IDS
- B. DLP
- C. IPS
- D. WAF

Answer: ([SHOW ANSWER](#))

Web application firewalls (WAF) are designed to protect web applications from attacks. They can detect and block malicious traffic before it reaches the application. IDS (Intrusion Detection System) is used for monitoring network traffic for suspicious activity. DLP (Data Loss Prevention) is used for preventing data from being lost or leaked. IPS (Intrusion Prevention System) is used for detecting and blocking attacks.

A. XML

B. HTML

C. SAML

D. JSON

Answer: (SHOW ANSWER)

SAML(Security Assertion Markup Language) is an XML-based protocol for exchanging security-related information between two parties. It is used for authentication and authorization. XML is a markup language that is used to store and transport data. SAML is a protocol that is used for authentication and authorization. JSON is a lightweight data interchange format. XML is a markup language that is used to store and transport data. HTML is a markup language that is used to create web pages.

NEW QUESTION: 435

Which of the following is a cloud service model? (Select two)

- A. IaaS
- B. SaaS
- C. PaaS
- D. XaaS

Answer: D (LEAVE A REPLY)

Cloud service models are categorized into three main types: Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). XaaS (Everything as a Service) is a broader term that encompasses all three models.

IaaS, PaaS, and SaaS are all cloud service models. XaaS is a broader term that encompasses all three models. IaaS is a cloud service model that provides virtualized computing resources over the internet. PaaS is a cloud service model that provides a platform for developing, running, and managing applications. SaaS is a cloud service model that provides software applications over the internet.

NEW QUESTION: 454

Which of the following is a characteristic of a cloud-based service?

- A. Scalability
- B. Flexibility
- C. Portability
- D. Reliability

Answer: D (LEAVE A REPLY)

Answer:

Answer:

DRS(Dynamic Resource Scheduling) is a feature of VMware vSphere that allows you to dynamically adjust the number of vCPUs and memory assigned to a virtual machine (VM) based on its current workload. This helps to optimize resource usage and improve performance. DRS can be configured to automatically balance the workload across hosts in a cluster, and it can also be configured to manually adjust resource allocation for specific VMs.

NEW QUESTION: 455

BYOD (Bring Your Own Device) is a policy that allows employees to use their personal mobile devices for work. This can be a cost-effective way to increase productivity, but it also poses security risks. Which of the following is a security risk associated with BYOD?

- A. Data loss
- B. DLP (Data Loss Prevention)
- C. Malware infection
- D. Identity theft

Answer: C (LEAVE A REPLY)

Malware is a type of software that is designed to cause damage to a computer system. It can be spread through email attachments, instant messages, and social media. Malware can steal sensitive information, corrupt files, and even take control of a computer. It is important to keep your system updated and to use antivirus software to protect against malware.

Answer: A (LEAVE A REPLY)

□□

SaaS is a cloud-based software delivery model. It allows users to access applications and services over the internet, without the need for local installation or hardware. SaaS is often used for productivity tools, customer relationship management (CRM), and enterprise resource planning (ERP). It offers scalability, flexibility, and lower upfront costs compared to traditional software licenses.

Cloud computing, storage, and services are often used together to provide a complete solution. This allows businesses to focus on their core operations while the cloud provider handles the infrastructure and maintenance. SaaS is a key component of the cloud ecosystem, enabling businesses to leverage the power of the cloud without the complexity of managing their own IT infrastructure.

NEW QUESTION: 470

Which of the following is NOT a characteristic of SaaS?

- A. Scalability
- B. Pay-as-you-go pricing
- C. CPU intensive
- D. Multi-tenancy

Answer: D (LEAVE A REPLY)

Scalability, pay-as-you-go pricing, and multi-tenancy are all characteristics of SaaS. CPU intensive is not a characteristic of SaaS.

NEW QUESTION: 471

Which of the following is NOT a characteristic of SaaS?

- A. Scalability
- B. Pay-as-you-go pricing
- C. IT intensive
- D. Multi-tenancy

Answer: (SHOW ANSWER)

Scalability, pay-as-you-go pricing, and multi-tenancy are all characteristics of SaaS. IT intensive is not a characteristic of SaaS.

NEW QUESTION: 472

Which of the following is NOT a characteristic of SaaS?

- A. Scalability
- B. Pay-as-you-go pricing
- C. IT intensive
- D. Multi-tenancy

Answer: B (LEAVE A REPLY)

Scalability, pay-as-you-go pricing, and multi-tenancy are all characteristics of SaaS. IT intensive is not a characteristic of SaaS.

NEW QUESTION: 484

Which of the following is a common method for measuring service availability?
Which of the following is a common method for measuring service availability?

- A. Mean Time Between Failures (MTBF)
- B. SLA
- C. Availability
- D. Uptime

Answer: B ([LEAVE A REPLY](#))

Service Level Agreement (SLA) is a contract between a service provider and a customer that defines the expected level of service. SLA includes metrics such as availability, performance, and response time. Availability is a key metric in an SLA, representing the percentage of time a service is available to users. It is typically measured as a percentage of time over a specific period, such as 99.9% availability over a year.

NEW QUESTION: 485

Which of the following is a common method for measuring service availability?
Which of the following is a common method for measuring service availability?

- A. Mean Time Between Failures (MTBF)
- B. SLA
- C. Availability
- D. Uptime

Answer: ([SHOW ANSWER](#))

Service Level Agreement (SLA) is a contract between a service provider and a customer that defines the expected level of service. SLA includes metrics such as availability, performance, and response time. Availability is a key metric in an SLA, representing the percentage of time a service is available to users. It is typically measured as a percentage of time over a specific period, such as 99.9% availability over a year.

NEW QUESTION: 486

Which of the following is a common method for measuring service availability?
Which of the following is a common method for measuring service availability?

- A. Mean Time Between Failures (MTBF)
- B. CPU usage
- C. CPU temperature
- D. CPU fan speed

Answer: D ([LEAVE A REPLY](#))

Service Level Agreement (SLA) is a contract between a service provider and a customer that defines the expected level of service. SLA includes metrics such as availability, performance, and response time. Availability is a key metric in an SLA, representing the percentage of time a service is available to users. It is typically measured as a percentage of time over a specific period, such as 99.9% availability over a year.

CPU fan speed is a common method for measuring service availability. It is a metric that indicates the speed at which the CPU fan is rotating, which is a direct indicator of the CPU's temperature. A fan speed that is too low can indicate that the CPU is overheating, which can lead to system crashes and downtime. Therefore, monitoring CPU fan speed is a common method for ensuring service availability.

NEW QUESTION: 533

Which of the following is a type of intrusion detection system (IDS)?
A. A system that monitors network traffic for suspicious activity and generates alerts when it detects such activity.
B. A system that monitors network traffic for suspicious activity and automatically takes action to block or prevent the activity.
C. A system that monitors network traffic for suspicious activity and automatically takes action to block or prevent the activity.
D. A system that monitors network traffic for suspicious activity and automatically takes action to block or prevent the activity.

- A. IDS
- B. IPS
- C. SIEM
- D. SIEM

Answer: B (LEAVE A REPLY)

Question:
Answer:

An Intrusion Prevention System (IPS) is a type of intrusion detection system (IDS) that not only detects suspicious activity but also automatically takes action to block or prevent the activity. IDS and IPS are both types of intrusion detection systems. IDS is a system that monitors network traffic for suspicious activity and generates alerts when it detects such activity. IPS is a system that monitors network traffic for suspicious activity and automatically takes action to block or prevent the activity. IPS is a type of IDS that is designed to prevent attacks, while IDS is designed to detect attacks.

NEW QUESTION: 534

Which of the following is a type of CPU?
A. A CPU that is designed for high-performance computing.
B. A CPU that is designed for high-performance computing.
C. A CPU that is designed for high-performance computing.
D. A CPU that is designed for high-performance computing.

- A. CPU
- B. CPU
- C. CPU
- D. CPU

Answer: C (LEAVE A REPLY)

Question:
Answer:

CPU is a type of processor that is used to execute instructions. It is a type of microprocessor that is used to execute instructions. CPU is a type of processor that is used to execute instructions. It is a type of microprocessor that is used to execute instructions. CPU is a type of processor that is used to execute instructions. It is a type of microprocessor that is used to execute instructions. CPU is a type of processor that is used to execute instructions. It is a type of microprocessor that is used to execute instructions.

NEW QUESTION: 552

NEW QUESTION: 555

Which of the following is a type of intrusion detection system (IDS)?

- A. IDS
- B. IPS
- C. SIEM
- D. WAF

Answer: (SHOW ANSWER)

AB

IDS (Intrusion Detection System) is a type of security system that monitors network traffic for suspicious activity and generates alerts when it detects such activity. It is designed to detect and alert on unauthorized access, misuse, or denial of service. IDS can be implemented in various ways, including network-based IDS (NIDS) and host-based IDS (HIDS). NIDS monitors traffic on the network, while HIDS monitors activity on individual hosts. IDS is often used in conjunction with other security measures, such as firewalls and intrusion prevention systems (IPS). IPS is a type of IDS that can automatically block or prevent suspicious activity. IDS is a critical component of a comprehensive security strategy.

WAF (Web Application Firewall) is a type of security system that monitors and filters HTTP traffic between a web application and the Internet. It is designed to protect web applications from various types of attacks, such as SQL injection, cross-site scripting (XSS), and denial of service (DoS). WAF is often used in conjunction with other security measures, such as firewalls and intrusion detection systems (IDS). WAF is a critical component of a comprehensive security strategy.

NEW QUESTION: 556

Which of the following is a type of intrusion prevention system (IPS)?

- A. SIEM
- B. IPS
- C. IDS
- D. WAF

Answer: B (LEAVE A REPLY)

IPS (Intrusion Prevention System) is a type of security system that monitors network traffic for suspicious activity and automatically blocks or prevents such activity. It is designed to detect and prevent unauthorized access, misuse, or denial of service. IPS can be implemented in various ways, including network-based IPS (NIPS) and host-based IPS (HIPS). NIPS monitors traffic on the network, while HIPS monitors activity on individual hosts. IPS is often used in conjunction with other security measures, such as firewalls and intrusion detection systems (IDS). IPS is a critical component of a comprehensive security strategy.

WAF (Web Application Firewall) is a type of security system that monitors and filters HTTP traffic between a web application and the Internet. It is designed to protect web applications from various types of attacks, such as SQL injection, cross-site scripting (XSS), and denial of service (DoS). WAF is often used in conjunction with other security measures, such as firewalls and intrusion detection systems (IDS). WAF is a critical component of a comprehensive security strategy.

CCSP is a certification for cloud security professionals. It is a highly respected and in-demand certification. DumpTop is a leading provider of CCSP study materials. DumpTop offers a wide range of CCSP study materials, including practice exams, study guides, and video courses. DumpTop is committed to providing high-quality study materials at a discount. Visit <https://www.dumptop.com/ISC/CCSP-dump.html> for more information. (827 Q&As Dumps, **30%OFF** Special Discount: **KrDump**)

NEW QUESTION: 564

Which of the following is a characteristic of a **cloud-based** storage solution?

- A. It is hosted on-premises.
- B. It is managed by the user.
- C. It is accessed over the internet.
- D. It is stored on a local hard drive.

Answer: C (LEAVE A REPLY)

Cloud-based storage solutions are hosted on remote servers and accessed over the internet. They are managed by the service provider, not the user. They are not stored on a local hard drive. They are accessed over the internet, which is why they are called cloud-based.

Cloud-based storage solutions are hosted on remote servers and accessed over the internet. They are managed by the service provider, not the user. They are not stored on a local hard drive. They are accessed over the internet, which is why they are called cloud-based.

NEW QUESTION: 565

Which of the following is a characteristic of a **cloud-based** storage solution?

- A. It is hosted on-premises.
- B. It is managed by the user.
- C. It is accessed over the internet.
- D. It is stored on a local hard drive.

Answer: D (LEAVE A REPLY)

Cloud-based storage solutions are hosted on remote servers and accessed over the internet. They are managed by the service provider, not the user. They are not stored on a local hard drive. They are accessed over the internet, which is why they are called cloud-based.

NEW QUESTION: 566

DRM (Digital Rights Management) is used to:

- A. Control access to digital content.
