|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Effectiveness | <p>The accuracy and completeness with which users achieve specified <b>goals</b>.</p> <p>Notes:</p> <ol style="list-style-type: none"> <li>1. Accuracy is the extent to which an actual outcome matches an intended outcome.</li> <li>2. Completeness is the extent to which the use of the system, product, or service produces all intended outcomes.</li> <li>3. Completeness can be measured as the success rate: (Number of users who achieve a specified goal) / (Number of users who attempt to reach the specified goal).</li> <li>4. Effectiveness is the attribute of <b>usability</b> that focuses on being able to accomplish <b>tasks</b>.</li> </ol> <p>Example:</p> <ol style="list-style-type: none"> <li>1. A car rental website does not offer <b>users</b> any opportunity to cancel a reservation. An analysis of the <b>context of use</b> shows that <b>users</b> need this function. There is a problem with the effectiveness of the website.</li> <li>2. A car rental website enables users to cancel a reservation. A <b>usability test</b> shows that only 5 out of 100 <b>users</b> are able to figure out how to cancel their reservation. Those who are able to figure out how to do it, do so quickly. There is a problem with the effectiveness but not with the <b>efficiency</b> of the website.</li> </ol> |
| Efficiency    | <p>The <b>resources</b> used in relation to the results achieved.</p> <p>Notes:</p> <ol style="list-style-type: none"> <li>1. <b>Resources</b> include time, human effort, financial and material <b>resources</b>.</li> <li>2. <b>Efficiency</b> is the attribute of <b>usability</b> that focuses on being able to accomplish a <b>task</b> using acceptable amounts of <b>resources</b>.</li> </ol> <p>Example:</p> <ol style="list-style-type: none"> <li>1. A car rental website enables <b>users</b> to cancel a reservation. A <b>usability test</b> shows that the cancellation procedure is needlessly complicated even though all <b>usability test participants</b> finally manage to cancel their reservations. The <b>effectiveness</b> of the website is OK, since all <b>users</b> manage to achieve their <b>goal</b>. There is a problem with the efficiency of the website.</li> <li>2. Sluggish response caused for example by an overloaded <b>interactive system</b> is a <b>usability problem</b>.</li> </ol>                                                                                                                                                                                                                                                                                                           |
