00 0000 000 000 0 00000.

Juniper Splunk SIEM integration can be achieved by using Juniper Mist, which can collect and analyze logs from various sources.

Syslog over UDP or TCP can be used to collect logs from various devices, including Juniper Mist, Marvis, and other network devices.

Juniper Mist can be configured to send logs to Syslog.

### NEW QUESTION: 20

"EX3400-48P can be configured to collect logs from various sources." Which Marvis Action can be used to collect logs from various sources? (Choose two)

- A. Configure the network device to send logs to Syslog.
- B. Configure the network device to send logs to Juniper Mist.
- C. Configure the network device to send logs to SFP.
- D. Configure the network device to send logs to 802.3.

Answer: A,D (LEAVE A REPLY)

Juniper Mist can be configured to collect logs from various sources, including Juniper Mist, Marvis, and other network devices.

Marvis Wired Assurance can be configured to collect logs from various sources, including Juniper Mist, Marvis, and other network devices.

Juniper Mist can be configured to collect logs from various sources, including Juniper Mist, Marvis, and other network devices. (A) Juniper Mist 802.3 can be configured to collect logs from various sources. (D) Juniper Mist 802.3 can be configured to collect logs from various sources.

Juniper Mist can be configured to collect logs from various sources, including Juniper Mist, Marvis, and other network devices.

"Marvis Wired Actions can be configured to collect logs from various sources, including Juniper Mist, Marvis, and other network devices. 802.3 can be configured to collect logs from various sources. Juniper Mist can be configured to collect logs from various sources."

Juniper Mist Wired Assurance - Marvis can be configured to collect logs from various sources.

Juniper EX can be configured to collect logs from various sources.

### NEW QUESTION: 21

Juniper Mist can be configured to collect logs from various sources, including Juniper Mist, Marvis, and other network devices. (Choose two)

- A. Configure the network device to send logs to Syslog.

Which two Juniper Mist Cloud components are used to collect and analyze data from the network?

□□ Mist Cloud components are used to collect and analyze data from the network?

- A. Mist Cloud and Mist AI
- B. Mist Cloud and Mist Managed
- C. Mist Cloud and Mist Analytics
- D. Mist Cloud and Mist Security

Answer: C ([LEAVE A REPLY](#))

Juniper Mist Cloud is a cloud-based network management platform.

It provides a centralized view of the network and allows you to manage and troubleshoot issues.

Juniper Mist Cloud also provides a variety of analytics and reporting tools.

For example, you can use Mist Cloud to monitor network performance, identify bottlenecks, and troubleshoot issues. You can also use Mist Cloud to manage network configuration and security.

"Which two Juniper Mist Cloud components are used to collect and analyze data from the network?"  
□□ A: Mist Cloud - org Juniper Mist Cloud components are used to collect and analyze data from the network.

□□ B: Mist Cloud - org Juniper Mist Cloud components are used to collect and analyze data from the network.

□□ D: Mist Cloud - org Juniper Mist Cloud components are used to collect and analyze data from the network.

□□ C: Mist Cloud - org Juniper Mist Cloud components are used to collect and analyze data from the network.

□□□□:

□□□ Juniper Mist AI - org Juniper Mist AI components are used to collect and analyze data from the network.

Juniper Mist Cloud - Wired Assurance components are used to collect and analyze data from the network.
