NEW QUESTION: 30

You are developing an application that includes two Docker containers.

The application must meet the following requirements

* The containers must not run as root.
* The containers must be deployed to Azure Container Instances by using a YAML file.
* The containers must share a lifecycle, resources, local network and storage volume.
* The storage volume must persist through container crashes.
* The storage volume must be destroyed on stop or restart of the containers.

You need to configure Azure Container Instances for the application.

Azure Storage is a Microsoft-managed service providing cloud storage that is highly available, secure, durable, scalable, and redundant. Azure Storage includes Azure Blobs (objects), Azure Data Lake Storage Gen2, Azure Files, Azure Queues, and Azure Tables. The cost of your storage account depends on the usage and the options you choose below. Learn more
PROJECT DETAILS
Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Property	Description
ShipLocation	the country/region where the order will be shipped
CorrelationId	a priority value for the order
Quantity	a user-defined field that stores the quantity of items in an order
AuditedAt	a user-defined field that records the date an order is audited

□□□□□ □□□ □□ □□ □□ □□□ □□□□.

Subscription type	Comments
FutureOrders	This subscription is reserved for future use and must not receive any orders.
HighPriorityOrders	Handle all high priority orders and International orders.
InternationalOrders	Handle orders where the country/region is not United States.
HighQuantityOrders	Handle only orders with quantities greater than 100 units.
AllOrders	This subscription is used for auditing purposes. This subscription must receive every single order. AllOrders has an Action defined that updates the AuditedAt property to include the date and time it was received by the subscription.

Correlation Filters - A CorrelationFilter holds a set of conditions that are matched against one or more of an arriving message's user and system properties. A common use is to match against the CorrelationId property, but the application can also choose to match against ContentType, Label, MessageId, ReplyTo, ReplyToSessionId, SessionId, To, and any user-defined properties. A match exists when an arriving message's value for a property is equal to the value specified in the correlation filter. For string expressions, the comparison is case-sensitive. When specifying multiple match properties, the filter combines them as a logical AND condition, meaning for the filter to match, all conditions must match.
Boolean filters - The TrueFilter and FalseFilter either cause all arriving messages (true) or none of the arriving messages (false) to be selected for the subscription.

NEW QUESTION: 44

You are developing an application to securely transfer data between on-premises file systems and Azure Blob storage. The application stores keys, secrets, and certificates in Azure Key Vault. The application uses the Azure Key Vault APIs.

The application must allow recovery of an accidental deletion of the key vault or key vault objects. Key vault objects must be retained for 90 days after deletion.

You need to protect the key vault and key vault objects.

NEW QUESTION: 54
You have a single page application (SPA) web application that manages information based on data returned by Microsoft Graph from another company's Azure Active Directory (Azure AD) instance.
Users must be able to authenticate and access Microsoft Graph by using their own company's Azure AD instance.
You need to configure the application manifest for the app registration.
□□□□□□ □□□ □□□□ □□□? □□□□□ □□ □□□□ □□□ □□□ □□□□□□.

□□ □□□ □□ requiredResourceAccess□ □□ □□□ □□□□ □□□□ □□□ □□ □□□ □□□ □□ □□□ □□□□□. □□□ □ □□□□□ □□□□ □□□ □□ □□□ □□ □□□ □□□□ □□□□.

resourceAppId□ □□ □□□□□ □□ □□□□ □□ □□□□□□. □ □□ □□ □□□ □□□ □□□ appId□ □□□□ □□□.

resourceAccess is an array that lists the OAuth2.0 permission scopes and app roles that the app requires from the specified resource. Contains the id and type values of the specified resources.

Example:

"requiredResourceAccess": [

{

"resourceAppId": "00000002-0000-0000-c000-000000000000",
"resourceAccess": [
{
"id": "311a71cc-e848-46a1-bdf8-97ff7156d8e6",
"type": "Scope"
}
]
}
],
Box 3: AzureADMyOrg
The signInAudience attribute specifies what Microsoft accounts are supported for the current application.
Supported values are:
AzureADMyOrg - Users with a Microsoft work or school account in my organization's Azure AD tenant (for example, single tenant) AzureADMultipleOrgs - Users with a Microsoft work or school account in any organization's Azure AD tenant (for example, multi-tenant) AzureADandPersonalMicrosoftAccount - Users with a personal Microsoft account, or a work or school account in any organization's Azure AD tenant Reference:

NEW QUESTION: 62
Case Study 5 - Wide World Importers

Background

Wide World Importers is moving all their datacenters to Azure. The company has developed several applications and services to support supply chain operations and would like to leverage serverless computing where possible.

Current environment

Windows Server 2016 virtual machine

This virtual machine (VM) runs Biz Talk Server 2016. The VM runs the following workflows:

* □□ □□ - □ □□□□□ □□□□ □□□ □ □□□ □□ □□□ □□ □□□ □□□ □□□□ □□□ □□□□ □□□□□.

* □□ □□ - □ □□□□□□ □□ □□, □□□ □, □□□ □□□ □□ □□ □□□ □□□□ □ □□□□.

VM□ □□ REST API □□□ □□□□□.

* □□□□ API - □ API□ □□, □□□ □ □□ □□□ □□□ □□□□ □□□ □□□□□.

* Location API - □□□ □ □□□□□□ □□□ □□□□□ □□□□ API□□□.

* □□ REST API - □ API□ □□ □ □□□□□ □□ □ □□□ □□ □□□ □□□□□.

□□ □□□

□□ □□ □

Shipping Logic □□ □□ □□ □□□ □□□□ □□□.

* Logic App□ □□□□ □□ □□ □ □□ □□ □□□□□ □□□□□.

* Support industry-standard protocol X12 message format for various messages including vessel content details and arrival notices.

* Secure resources to the corporate VNet and use dedicated storage resources with a fixed costing model.
* Maintain on-premises connectivity to support legacy applications and final BizTalk migrations.

Shipping Function app

Implement secure function endpoints by using app-level security and include Azure Active Directory (Azure AD).

REST APIs

The REST API's that support the solution must meet the following requirements:

* Secure resources to the corporate VNet.
* Allow deployment to a testing location within Azure while not incurring additional costs.
* Automatically scale to double capacity during peak shipping times while not causing application downtime.
* Minimize costs when selecting an Azure payment model.

NEW QUESTION: 75
Your company is migrating applications to Azure. The IT department must allow internal developers to communicate with Microsoft support.
The service agents of the IT department must only have view resources and create support ticket permissions to all subscriptions. A new custom role must be created by reusing a default role definition and changing the permissions.
