NEW QUESTION: 3

VM2□ □□ □□ □□ □□□ □□□□ □□□.

□□□ □□□ □□ □□□?

A. □□□ □□ □□□ □□□□□.

B. Credential Guard is enabled.

C. Credential Guard is disabled.

D. Credential Guard is not installed.

Answer: (SHOW ANSWER)

Scenario: Fabrikam, Inc. has a hybrid cloud environment. The environment consists of a private network and an Azure cloud environment. The private network contains a Windows Server 2016 virtual machine (VM) named VM1. VM1 is connected to the private network via a network interface card (NIC). The Azure cloud environment contains a Windows Server 2016 virtual machine named VM2. VM2 is connected to the Azure cloud environment via a network interface card (NIC). VM1 and VM2 are connected to each other via a network interface card (NIC).

VM1 is running a service named Service1. Service1 is configured to connect to a database named Database1. Database1 is located in the Azure cloud environment. Service1 is configured to connect to Database1 using a network interface card (NIC). Service1 is configured to connect to Database1 using a network interface card (NIC).

VM2 is running a service named Service2. Service2 is configured to connect to a database named Database2. Database2 is located in the Azure cloud environment. Service2 is configured to connect to Database2 using a network interface card (NIC). Service2 is configured to connect to Database2 using a network interface card (NIC).

Question: What is the status of Credential Guard on VM1?

Options: A. Credential Guard is enabled. B. Credential Guard is disabled. C. Credential Guard is not installed. D. Credential Guard is not applicable. E. Credential Guard is not supported. F. Credential Guard is not available. G. Credential Guard is not configured. H. Credential Guard is not running. I. Credential Guard is not started. J. Credential Guard is not active.

Answer: B

Scenario: Fabrikam, Inc. has a hybrid cloud environment. The environment consists of a private network and an Azure cloud environment. The private network contains a Windows Server 2016 virtual machine (VM) named VM1. VM1 is connected to the private network via a network interface card (NIC). The Azure cloud environment contains a Windows Server 2016 virtual machine named VM2. VM2 is connected to the Azure cloud environment via a network interface card (NIC). VM1 and VM2 are connected to each other via a network interface card (NIC).

VM1 is running a service named Service1. Service1 is configured to connect to a database named Database1. Database1 is located in the Azure cloud environment. Service1 is configured to connect to Database1 using a network interface card (NIC). Service1 is configured to connect to Database1 using a network interface card (NIC).

VM2 is running a service named Service2. Service2 is configured to connect to a database named Database2. Database2 is located in the Azure cloud environment. Service2 is configured to connect to Database2 using a network interface card (NIC). Service2 is configured to connect to Database2 using a network interface card (NIC).

Question: What is the status of Credential Guard on VM1?

Options: A. Credential Guard is enabled. B. Credential Guard is disabled. C. Credential Guard is not installed. D. Credential Guard is not applicable. E. Credential Guard is not supported. F. Credential Guard is not available. G. Credential Guard is not configured. H. Credential Guard is not running. I. Credential Guard is not started. J. Credential Guard is not active.

NEW QUESTION: 4

Scenario: Fabrikam, Inc. has a hybrid cloud environment. The environment consists of a private network and an Azure cloud environment. The private network contains a Windows Server 2016 virtual machine (VM) named VM1. VM1 is connected to the private network via a network interface card (NIC). The Azure cloud environment contains a Windows Server 2016 virtual machine named VM2. VM2 is connected to the Azure cloud environment via a network interface card (NIC). VM1 and VM2 are connected to each other via a network interface card (NIC).

VM1 is running a service named Service1. Service1 is configured to connect to a database named Database1. Database1 is located in the Azure cloud environment. Service1 is configured to connect to Database1 using a network interface card (NIC). Service1 is configured to connect to Database1 using a network interface card (NIC).

VM2 is running a service named Service2. Service2 is configured to connect to a database named Database2. Database2 is located in the Azure cloud environment. Service2 is configured to connect to Database2 using a network interface card (NIC). Service2 is configured to connect to Database2 using a network interface card (NIC).

Question: What is the status of Credential Guard on VM1?

Answer:

B

NEW QUESTION: 142

Contoso, Ltd. is a multinational corporation with offices in Canada and the United States.

The company has a main office in the United States and a branch office in Canada.

The main office in the United States is located at 100 Main Street, New York, NY 10001. The branch office in Canada is located at 100 Main Street, Toronto, ON M5H 1A3.

The company has a total of 100 employees.

The company uses Active Directory (AD) for authentication and authorization.

The AD forest is named contoso.com. The domain controllers are located in the United States. The branch office in Canada uses a separate domain named canada.contoso.com. The branch office domain is a child domain of the main domain.

The branch office domain controllers are located in Canada.

The branch office domain controllers are named DC1 and DC2.

The branch office domain controllers are members of the main domain.

The branch office domain controllers are also members of the branch office domain.

Server4 is a Windows Server 2012 R2 server located in the branch office. Server4 is a member of the main domain and the branch office domain.

Server2 is a Windows Server 2012 R2 server located in the main office. Server2 is a member of the main domain.

VM3 is a Windows Server 2012 R2 virtual machine located in the main office. VM3 is a member of the main domain.

The main office domain controllers are named DC1 and DC2.

The main office domain controllers are members of the main domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.

The main office domain controllers are also members of the branch office domain.
