The image shows a PowerShell script being edited in a text editor. The script is designed to update a specific directory setting in Microsoft Graph. It starts by reading a list of blocked words from a file, joining them into a single string. Then, it checks if a setting named 'Group.Unified' exists. If not, it creates a new setting template and then the setting itself. Finally, it updates the 'CustomBlockedWordsList' property of the existing setting with the list of blocked words. Two dropdown menus are visible: one for 'New-MgBetaDirectorySetting' and another for 'Update-MgBetaDirectorySetting', both with 'New-MgBetaDirectorySetting' and 'Update-MgBetaDirectorySetting' selected respectively.

**Answer:**

```
$NameList = Get-Content "C:\work\current\blockedwordslist.txt"
$NameList = [string]::join(", ", $NameList)

$Setting = Get-MgBetaDirectorySetting | where { $_.DisplayName -eq "Group.Unified" }
