NEW QUESTION: 42

1. **Introduction:** AI Builder is a powerful tool that allows you to create custom AI models without the need for extensive programming knowledge. It's designed to be user-friendly and accessible to a wide range of users.

2. **Getting Started:** To get started with AI Builder, you'll need to create an account and set up your workspace. Once you're ready, you can begin by selecting a template or starting from scratch.

3. **Data Collection:** The first step in building an AI model is collecting data. AI Builder provides various methods for data collection, including uploading files, connecting to databases, and using APIs.

4. **Model Training:** Once you have your data, the next step is training the model. AI Builder offers a variety of pre-trained models and allows you to customize them to fit your specific needs.

5. **Deployment:** After training, you can deploy your model to a web application or integrate it into your existing system. AI Builder makes it easy to share your models and track their performance.

6. **Conclusion:** AI Builder is a game-changer for businesses looking to leverage AI without the high cost and complexity of traditional machine learning. It's a tool that's easy to learn, easy to use, and easy to integrate.

Business events in Microsoft Power Automate

Business events can be consumed in Microsoft Power Automate via the application connector. The connector has a trigger that is named when a business event occurs. This trigger can be used to subscribe to any of the business events that are available in the target instance of the application.

Reference:
<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/business-events/business-events-flow>

□□:□ □□□ □□□ 1□□ □□□ □□□□.

Answer Area

The diagram illustrates the relationship between various tools and their benefits within the Microsoft Power Platform ecosystem. It features a central 'Microsoft' logo with a four-colored square (red, green, blue, orange) to its left. Below the logo, the word 'Benefit' is centered. To the left of the 'Benefit' column is a vertical line, and to the right is another vertical line. Between these lines are three empty rectangular boxes for 'Tool' names. To the left of the first line, there is a list of tools: 'connectors', 'canvas apps', 'AI Builder', 'Power Automate', and 'portals'. The tools are listed in a column, with 'connectors' at the top and 'portals' at the bottom. The benefits are listed in a column to the right of the tools, with 'Easy data integration' at the top, 'Low code / no code across applications' in the middle, and 'Easy to customize front end' at the bottom. The tools are connected to the benefits by horizontal lines: 'connectors' to 'Easy data integration', 'canvas apps' to 'Low code / no code across applications', and 'AI Builder' to 'Easy to customize front end'. 'Power Automate' and 'portals' are listed below 'AI Builder' but are not connected to any specific benefit in this diagram.

Tools	Benefit	Tool
connectors	Easy data integration	
canvas apps	Low code / no code across applications	
AI Builder	Easy to customize front end	
Power Automate		
portals		

Answer:

Tools	Benefit	Tool
connectors	Easy data integration	connectors
canvas apps	Easy data integration	
AI Builder	Low code / no code across applications	AI Builder
Power Automate	Low code / no code across applications	
portals	Easy to customize front end	canvas apps

NEW QUESTION: 87

Which of the following is a requirement for Dynamics 365 to connect to a third-party application?
 The application must be a Microsoft 365 application.
 The application must be a Microsoft 365 application.
 The application must be a Microsoft 365 application.

Action	Component
Ensure that Power Automate can interact with the third-party application.	Triggers Logic Apps Connectors Gateways
Periodically check for data changes in the third-party application.	Actions Triggers Connectors DirectQuery

Answer:

Action	Component
Ensure that Power Automate can interact with the third-party application.	Triggers Logic Apps Connectors Gateways
Periodically check for data changes in the third-party application.	Actions Triggers Connectors DirectQuery

NEW QUESTION: 88

Which of the following is a connector that you can use in your Power Apps and in your Microsoft Flows? AppSource is a Microsoft Store where you can find connectors. Which of the following is a connector that you can use in your Power Apps and in your Microsoft Flows?

- A. Microsoft Flow connector
- B. Microsoft Flow connector
- C. Microsoft Flow connector
- D. Microsoft Flow connector
- E. Microsoft Azure connector

Answer: A (LEAVE A REPLY)

There are 250 + predefined connectors that you can use in your PowerApps and in your Microsoft Flows. If you do not find any that suits your needs you have the possibility to create a Custom Connector.

Note: A Custom Connector is a wrapper around a REST API (Logic Apps also supports SOAP APIs) that allows Logic Apps, Microsoft Flow, or PowerApps to communicate with that REST or SOAP API.

Answer: (SHOW ANSWER)

A: Basic Sharing for Dashboards and Reports through a workspace is the most common way of sharing the Power BI content. Basic Sharing is very simple and easy to use method. You can simply click on the Share button in the dashboard or report, and then share it with other users.

B: Apps are great sharing method for multiple environment, and best way of sharing for users in production environment.

Power BI App is the solution for multiple environment approach. With Power BI App, your development environment (workspace), and user environment (App) are isolated from each other.

Note: If you are using SharePoint online as a portal for document management and some other reasons already, then consider using Embed in SharePoint Online feature of Power BI reports. This method is secure and you can share the report only with Power BI users you want.

E: Sometimes, you don't need a secure way of sharing, you may search for an easy and free way of sharing, and your content is not confidential or sensitive. Publish to web is your friend in such situation. This is the only free way of sharing in Power BI, but be aware that this method is not secure.

Publish to web method, gives you an embed code, which you can use in any web pages to embed the Power BI report in it Reference:
