NEW QUESTION: 41

Which of the following is a characteristic of canvas apps? (Select two.)

A. They are built from a data model.

B. They are built from a user experience design.

C. They are built from a data model and a user experience design.

Answer:

Explanation:

Box 1: canvas

Both model-driven and canvas apps allow you to easily build business apps. They both share access to the Common Data Service providing standard and custom entities. Canvas apps start with your user experience, crafting a highly tailored interface with the power of a blank canvas and connecting it to 200 data sources.

Canvas apps can be built for web, mobile, and tablet applications. Model-driven apps start with your data model - building up from the shape of your core business data and processes in the Common Data Service to model forms, views, and other components. Model-driven apps automatically generate great UI that is responsive across devices.

Box 2: model-driven

Reference:

<https://powerapps.microsoft.com/sv-se/blog/introducing-model-driven-apps/>

NEW QUESTION: 42

Which of the following is a characteristic of model-driven apps? (Select two.)

A. They are built from a data model.

Answer: A,C (LEAVE A REPLY)

A: You can export a flow as a package and import it into a different environment, or use it to restore the in the same environment at a later point in time.

C: The ability to make a copy of your flow is often useful when you want to create a flow similar to something you've already created. Or, if you want to maintain a draft of your working flow as you work on adding more functionality.

Here's how:

Go to your My flows page. Click on the More (...) menu item next to the flow that you want to create a copy of. Click on the Save As command.

- D. Text < 100 & Text > 100 & Text < 100 & Text > 100

Answer: C (LEAVE A REPLY)

Restore a canvas app to a previous version in PowerApps.

1. Open powerapps.com, and then click or tap Apps in the left navigation bar.
2. Near the right edge, click or tap the info icon for the app that you want to restore.
3. Click or tap the Versions tab, and then click or tap Restore for the version that you want to restore.
4. In the confirmation dialog box, click or tap Restore.

A new version is added to your list.

NEW QUESTION: 90

Microsoft Flow is a cloud-based workflow automation tool that allows users to create and manage workflows that automate repetitive tasks. It is designed to be easy to use and integrate with a wide range of applications and services. Microsoft Flow can be used to automate tasks such as sending emails, updating spreadsheets, and creating reports. It is available as a standalone application or as part of the Microsoft 365 suite of products.

Answer:

Explanation:

Box 1: Trigger

A trigger is something that triggers or starts the workflow. It could be a new file uploaded to a document library, a new item created in the list or an email sent to your Inbox - something that will start (kick-off the workflow).

There are two types of triggers:

- * Automatic trigger is pre-programmed into the workflow based on a certain rule (i.e. new document or item created, email sent, etc.)
 - * Manual Trigger is a trigger initiated by a user. Unlike with automatic trigger above, the workflow will only start when initiated manually by the end user (for example, from the Document Library for a selected file). Manual trigger is only supported for certain types of workflows (i.e. Get feedback from your manager for the selected file)
- Box 2: action An action is something that occurs as a result of the workflow.

Box 3: expression

Sometimes users just need to do basic operations like getting the current time, adding numbers together, or replacing a part of a string of text. That's possible inline in any flow action. Microsoft Flow leverages the same Workflow Definition Language used by Azure Logic apps. For new users who are unfamiliar with the expression language, there is an inline help experience that shows how to use each expression as they build out their flow.

Box 4: flow type

There are four different Flow types that you can choose from when starting out. You can create a scheduled flow, automated flow, instant flow, or a business process flow.

□□. □ □□□ □□□ 1□□ □□□ □□□□.

Answer:

Explanation:

Box 1: Report

Reports are more detailed data displayed in many formats like chart, graphs list and in tabular, etc.

Box 2: Dashboard

Dashboards are a business key performance indicator view where it displays key values that can change business profits and can be glanced at one screen.

Box 3: Report

Power BI dashboards cannot slice and dice, but reports have many ways to filter and slice.

Note: Power BI dashboards are one placeholder to display the most important decision-making facts to run a business. But reports are more detailed data displayed in many formats like chart, graphs list and in tabular, etc. Reports are based on one dataset or one business unit data for example reports of a store belonging to California.

NEW QUESTION: 107

□□□□ Power BI□ □□□□ □□□□ □□□□ □□□□ □□□□ □□□□□. □□ □ □□□ □□ □□□ □□□ □□ □□□□□□. □□□ □□□ □□□□ □□□□□. □□: □ □□□ □□□ 1□□ □□□ □□□□.

Answer:

Explanation:

Box 1: Yes

The following list provides advantages to using aggregations:
Query performance over big data - as users interact with visuals on Power BI reports, DAX queries are submitted to the dataset. Boost query speeds by caching data at the aggregated level, using a fraction of the resources required at the detail level. Unlock big data in a way that would otherwise be impossible.

Box 2: No

You can connect to model-driven apps in Dynamics 365 with Power BI Desktop to create custom reports and dashboards for use with the Power BI service.

You can use similar steps to connect to model-driven apps in Dynamics 365 using Office Excel Power Query by selecting From Other Sources on the Power Query tab in Excel.

Box 3: Yes

Using the PowerApps custom visual, you will be able to pass context aware data to a PowerApps app which updates in real time as you make changes to your report.

NEW QUESTION: 143

□□□ □□□□ □□ □□ □□□□□□ □ □□ □□□□□ □□□□□. □□□ IT □□□ □□
□□ Microsoft Excel □ □□□□ □□ □□□ □□□□.
Excel □□ □□□ Dynamics 365 Field Service □ □□□ □□□ □□□ □□□□ □□ □ □□□
□ □□□□ □□□.
□□□□ □□□□ □□□.
□□□ □□□□ □□□? □□□□□ □□ □□□□ □□□ □□□ □□□□□□.
□□: □ □□□ □□□ 1□□ □□□ □□□□.

Answer:

Explanation:

Box 1: Dynamics 365 Workflow notifications

You can configure the system to send email messages to users when workflow-related events occur.

Note:

- * Go to Navigation pane > Modules > System administration > Users > Users.
- * In the list, find and select the desired record.
- * On the Action pane, click User options.
- * Click the Workflow tab. Make sure that the Notifications section is expanded. In the Notifications section, you can specify how you want the user to be notified about workflow-related events.

Box 2: Dynamics 365 Field Service

Supply Chain Management enables synchronization of business processes between Dynamics 365 Supply Chain Management and Dynamics 365 Field Service. The integration scenarios are configured by using extensible Data integrator templates and Common Data Service to enable the synchronization of business processes. Standard templates can be used to create custom integration projects, where additional standard and custom fields and entities can be mapped to adjust the integration and meet specific business needs.
