 □□□□. □ □□□ □□ □ □□ □□□ □□□ □□□□□?

- A. 4□

- B. 2
- C. 3
- D. 4

Answer: D (LEAVE A REPLY)

Primary prevention aims to prevent the onset of a disease or injury before it occurs. This is done by reducing the risk factors that lead to the disease or injury. For example, wearing a seat belt can help prevent injuries from car accidents, and using sunscreen can help prevent skin cancer. Primary prevention is the most effective way to reduce the burden of disease and injury.

Primary prevention : 1

<https://www.iwh.on.ca/what-researchers-mean-by/primary-secondary-and-tertiary-prevention>

NEW QUESTION: 101

Which of the following is not a characteristic of primary prevention?

Primary prevention aims to prevent the onset of a disease or injury before it occurs.

- A. Reducing the risk factors that lead to the disease or injury
- B. Promoting health and well-being
- C. Identifying and treating individuals at high risk of developing the disease or injury
- D. Providing support and care to individuals who have already developed the disease or injury

Answer: A (LEAVE A REPLY)

NEW QUESTION: 102

Which of the following is not a characteristic of secondary prevention?

Secondary prevention aims to detect and treat a disease or injury as early as possible to prevent complications and reduce the severity of the disease or injury. This is done by identifying individuals at high risk of developing the disease or injury and providing them with early diagnosis and treatment.

- A. Identifying and treating individuals at high risk of developing the disease or injury
- B. Reducing the risk factors that lead to the disease or injury
- C. Promoting health and well-being
- D. Providing support and care to individuals who have already developed the disease or injury

Answer: D (LEAVE A REPLY)

NEW QUESTION: 172

Which of the following is a risk management tool?
A?

- A. SWOT
- B. Failure Mode and Effects Analysis (FMEA)
- C. Risk Matrix
- D. 5 Whys

Answer: B (LEAVE A REPLY)

FMEA (Failure Mode and Effects Analysis) is a systematic approach for identifying and mitigating risks in a process or product. It involves identifying potential failure modes, their causes, and their effects, and then prioritizing them based on their severity, occurrence, and detectability. FMEA is used to prevent failures before they occur, and it is a key tool in risk management.

SWOT (Strengths, Weaknesses, Opportunities, Threats) is a strategic planning tool used to identify internal and external factors that can affect an organization's performance. It is used to assess the organization's current position and to develop strategies to leverage strengths and opportunities, and to address weaknesses and threats.

Risk Matrix is a tool used to assess the risk of an event occurring, based on the likelihood of the event and the potential consequences. It is used to prioritize risks and to develop strategies to mitigate them.

5 Whys is a root cause analysis tool used to identify the underlying causes of a problem. It involves asking "why" five times to drill down to the root cause of the problem.

Failure Mode and Effects Analysis (FMEA) is a systematic approach for identifying and mitigating risks in a process or product. It involves identifying potential failure modes, their causes, and their effects, and then prioritizing them based on their severity, occurrence, and detectability. FMEA is used to prevent failures before they occur, and it is a key tool in risk management.

RPN (Risk Priority Number) is a numerical value used to prioritize risks. It is calculated by multiplying the severity, occurrence, and detectability ratings for a failure mode. The higher the RPN, the higher the priority for that failure mode.

FMEA is a key tool in risk management, and it is used to prevent failures before they occur. It is a systematic approach for identifying and mitigating risks in a process or product. It involves identifying potential failure modes, their causes, and their effects, and then prioritizing them based on their severity, occurrence, and detectability. FMEA is used to prevent failures before they occur, and it is a key tool in risk management.

QI (Quality Improvement) is a systematic approach for identifying and eliminating the causes of defects and waste, and for continuously improving the quality of a process or product. It involves identifying areas for improvement, measuring performance, and implementing changes to improve performance. QI is used to improve the quality of a process or product, and it is a key tool in risk management.

1. Identify the problem.
2. Analyze the data.
3. Develop a plan.

NEW QUESTION: 179

Which of the following is a federal agency that oversees the accreditation of health care organizations?

- A. American College of Surgeons (ACS)
- B. Centers for Disease Control and Prevention (CDC)
- C. Centers for Medicare and Medicaid Services (CMS)
- D. United States Postal Service (USPSTF)

Answer: [\(SHOW ANSWER\)](#)

Correct:

CDC is a federal agency that oversees the accreditation of health care organizations. It is part of the Department of Health and Human Services.

Incorrect B: CDC is a federal agency that oversees the accreditation of health care organizations.

Incorrect C: CMS is a federal agency that oversees the accreditation of health care organizations.

Incorrect D:

CDC is a federal agency that oversees the accreditation of health care organizations. It is part of the Department of Health and Human Services. CPHQ is a certification program for health care organizations.

NEW QUESTION: 180

CAHPS (Consumer Assessment of Healthcare Providers and Systems) is a patient satisfaction survey. Which of the following is a goal of CAHPS?

to improve patient satisfaction, to improve patient safety, to improve patient care, to improve patient experience.

- A. to improve patient satisfaction
- B. to improve patient safety
- C. to improve patient care
- D. to improve patient experience

Answer: [B \(LEAVE A REPLY\)](#)

NEW QUESTION: 181

Which of the following is a type of root cause analysis (RCA) used to identify the causes of medical errors?

to identify the causes of medical errors, to identify the causes of patient safety incidents, to identify the causes of patient care incidents?

- A. Error and Violation Investigation (EVI)
- B. Root Cause Analysis (RCA)
- C. Failure Mode and Effects Analysis (FMEA)
- D. Human Factors Analysis and Critical Decision Method (HFACDM)

Answer: [B \(LEAVE A REPLY\)](#)

Root Cause Analysis (RCA) is a type of root cause analysis used to identify the causes of medical errors. RCA is a systematic process for identifying the causes of medical errors.

Incorrect A: Error and Violation Investigation (EVI) is a type of root cause analysis used to identify the causes of medical errors.

Incorrect C: Failure Mode and Effects Analysis (FMEA) is a type of root cause analysis used to identify the causes of medical errors.

Incorrect D: Human Factors Analysis and Critical Decision Method (HFACDM) is a type of root cause analysis used to identify the causes of medical errors.

Answer: A (LEAVE A REPLY)

Healthcare Effectiveness Data and Information Set(HEDIS) is a set of standardized measures used to assess the quality of health care. The HEDIS measures are used to compare the performance of health plans and to identify areas for improvement. The HEDIS measures are based on a set of 12 domains, each of which is further divided into sub-domains. The HEDIS measures are used to assess the performance of health plans in a number of areas, including: patient access, patient satisfaction, care coordination, and clinical outcomes. The HEDIS measures are used to assess the performance of health plans in a number of areas, including: patient access, patient satisfaction, care coordination, and clinical outcomes. The HEDIS measures are used to assess the performance of health plans in a number of areas, including: patient access, patient satisfaction, care coordination, and clinical outcomes.

NEW QUESTION: 218

Which of the following is a characteristic of a primary care physician?

- A. They typically work in a hospital setting.
- B. They typically work in a private practice setting.
- C. They typically work in a specialty clinic setting.
- D. They typically work in a research setting.

Answer: (SHOW ANSWER)

Primary care physicians are the first point of contact for most patients. They are responsible for providing a wide range of medical services, including diagnosis, treatment, and prevention of disease. They are also responsible for coordinating care with other healthcare providers. Primary care physicians typically work in a variety of settings, including hospitals, private practices, and specialty clinics.

Primary care physicians are responsible for providing a wide range of medical services, including diagnosis, treatment, and prevention of disease. They are also responsible for coordinating care with other healthcare providers. Primary care physicians typically work in a variety of settings, including hospitals, private practices, and specialty clinics.

Primary care physicians (A): They typically work in a private practice setting.

Primary care physicians (C): They typically work in a specialty clinic setting.

Primary care physicians (D): They typically work in a research setting.
