Answer: C (LEAVE A REPLY)

D. VMs are not connected to the network.
*VMs are connected to the network.
*VMs are not connected to the network.

Answer: B (LEAVE A REPLY)

Prism is a management tool for Nutanix VMs. It provides a central console for managing VMs, including creating, deleting, and monitoring them. Prism also provides a dashboard for monitoring VM performance and health. VMs are connected to the network through vNICs. VMs are not connected to the network through physical NICs. VMs are not connected to the network through SFPs. VMs are not connected to the network through vNICs.

NEW QUESTION: 12

Which of the following is a valid configuration for a VM vNIC? (Select two.)

A. VM vNIC is connected to a physical NIC.
B. VM vNIC is connected to a physical SFP.
C. VM vNIC is connected to a physical vNIC.
D. VM vNIC is connected to a physical VM vNIC.

Answer: A (LEAVE A REPLY)

Nutanix Support & Insights provides a central console for managing VMs, including creating, deleting, and monitoring them. It also provides a dashboard for monitoring VM performance and health. □□□□ □□ □□ □□□ □□ □□□□ □□□□ □□, □□ □ □□□ □□□□□ □□□□ □
□□.
□□ □□□□ □□□□ □□□?
A. SMTP
B. DNS
C. SNMP
D. NTP

Answer: D (LEAVE A REPLY)

NTP is a protocol used for time synchronization between devices. It is used to ensure that all devices in a network have the same time. NTP is used in a variety of applications, including network management, logging, and security. In a Nutanix environment, NTP is used to ensure that all nodes in the cluster have the same time. This is important for the proper functioning of the cluster and for the accuracy of logs and security events.

NEW QUESTION: 21

Prism Central can be used to manage and monitor Nutanix environments. Which of the following is a benefit of using Prism Central?

- A. It provides a single point of management for all Nutanix environments.
- B. It allows for centralized logging and monitoring of all Nutanix environments.
- C. It provides a single point of management for all VMs in all Nutanix environments.
- D. It allows for centralized management of all VMs in all Nutanix environments.

Answer: (SHOW ANSWER)

NEW QUESTION: 22

Nutanix AHV supports up to 4 VMs per node. Which of the following is a benefit of using AHV?

- A. It provides a single point of management for all VMs in all Nutanix environments.
- B. It allows for centralized logging and monitoring of all VMs in all Nutanix environments.
- C. It provides a single point of management for all VMs in all Nutanix environments.
- D. It allows for centralized management of all VMs in all Nutanix environments.

Answer: A (LEAVE A REPLY)

Nutanix AHV is a hypervisor that runs on Nutanix nodes. It provides a single point of management for all VMs in all Nutanix environments. This is important for the proper functioning of the cluster and for the accuracy of logs and security events. AHV also provides a variety of features, including centralized logging and monitoring, and a single point of management for all VMs in all Nutanix environments. This makes it a very powerful and flexible hypervisor for use in a Nutanix environment.

NEW QUESTION: 23

Which of the following is a benefit of using AHV?

- A. CPU usage is limited to 20% per VM.
- B. CPU usage is limited to 100% per VM.
- C. CPU usage is limited to 20% per VM.
- D. CPU usage is limited to 100% per VM.
