NEW QUESTION: 4

Microsoft ExpressRoute is a Microsoft service that provides a private, high-speed connection between on-premises networks and Microsoft Azure cloud services. ExpressRoute is a dedicated network path that bypasses the public Internet. MSEE (Microsoft Enterprise Edge Router) is a cloud-managed router that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. MSEE is a cloud-managed router that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services.

A. Yes

B. No

Answer: B (LEAVE A REPLY)

Express Route is a Microsoft service that provides a private, high-speed connection between on-premises networks and Microsoft Azure cloud services. ExpressRoute is a dedicated network path that bypasses the public Internet. MSEE (Microsoft Enterprise Edge Router) is a cloud-managed router that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. MSEE is a cloud-managed router that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. SLA is a service level agreement that defines the expected performance and availability of a service. SLA is a service level agreement that defines the expected performance and availability of a service. 30 days of data retention.

NEW QUESTION: 5

Which of the following is a valid IP address for a host in a VPC?

A. 10.0.0.1/24

B. 10.0.0.1/16

C. 10.0.0.1/8

D. 10.0.0.1/32

Answer: A (LEAVE A REPLY)

NEW QUESTION: 6

Aviatrix is a cloud-native network fabric that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. Aviatrix is a cloud-native network fabric that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. Aviatrix is a cloud-native network fabric that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. Aviatrix is a cloud-native network fabric that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services.

Packet Capture	?	A feature that allows users to export their current Controller configurations (resources) into Terraform files (.tf) and import them into their Terraform environment, facilitating an easy transition to using Terraform to manage their infrastructure.
Ping and Traceroute	?	A tool that collects and helps you manage your network CIDR ranges at a central place, eliminating the need to keep an Excel sheet on all your VPC network addresses allocations.
Export to Terraform	?	Ability to take live packet capture at any spoke VPC/VNet/VNC and also display it in Wireshark.
VPC Tracker	?	Ability to run basic troubleshooting tools from a simplified UI.

Answer:

NEW QUESTION: 7

PAN is a cloud-native network fabric that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. PAN is a cloud-native network fabric that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. PAN is a cloud-native network fabric that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services. PAN is a cloud-native network fabric that provides a secure, high-speed connection between on-premises networks and Microsoft Azure cloud services.
