NEW QUESTION: 12

Which of the following is a ZTNA feature? (Select two.)

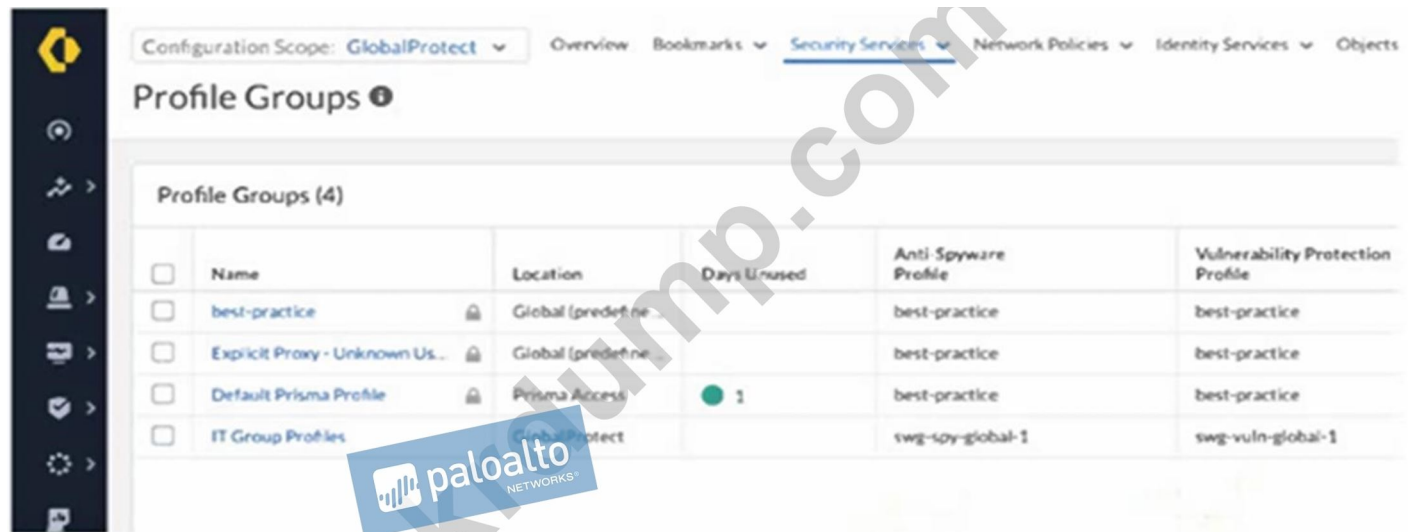

- A. DNS-based access control.
- B. NAT-based access control.
- C. IP-based access control.
- D. Port-based access control.

Answer: B (LEAVE A REPLY)

ZTNA is a security model that uses a Zero Trust Network Architecture (ZTNA) to provide secure access to applications and data. It is based on the principle of "least privilege" and uses a combination of identity, device, and context-based policies to control access. NAT (Network Address Translation) is a technique used to map private IP addresses to a single public IP address, allowing multiple devices to share a single public IP. IP-based access control is a traditional security model that uses IP addresses to control access to resources. Port-based access control is a traditional security model that uses port numbers to control access to resources.

NEW QUESTION: 13

GlobalProtect is a Palo Alto Networks security solution that provides secure access to applications and data. It is based on the principle of "least privilege" and uses a combination of identity, device, and context-based policies to control access. Prisma Access is a Palo Alto Networks security solution that provides secure access to applications and data. It is based on the principle of "least privilege" and uses a combination of identity, device, and context-based policies to control access. Which of the following is a GlobalProtect feature? (Select two.)

The screenshot shows the Palo Alto Networks GlobalProtect configuration page. The "Configuration Scope" is set to "GlobalProtect". The "Profile Groups" section is expanded, showing a table with 4 profile groups. The table has columns for Name, Location, Days Used, Anti-Spyware Profile, and Vulnerability Protection Profile. The profile groups listed are: best-practice, Explicit Proxy - Unknown Us..., Default Prisma Profile, and IT Group Profiles. The "Default Prisma Profile" is highlighted with a green dot in the "Days Used" column, indicating it is the active profile.

Name	Location	Days Used	Anti-Spyware Profile	Vulnerability Protection Profile
best-practice	Global (predefine)		best-practice	best-practice
Explicit Proxy - Unknown Us...	Global (predefine)		best-practice	best-practice
Default Prisma Profile	Prisma Access	1	best-practice	best-practice
IT Group Profiles	Prisma Access		swg-spy-global-1	swg-vuln-global-1

- A. GlobalProtect is a Palo Alto Networks security solution that provides secure access to applications and data.
- B. Prisma Access is a Palo Alto Networks security solution that provides secure access to applications and data.
- C. GlobalProtect is a Palo Alto Networks security solution that provides secure access to applications and data.
- D. Prisma Access is a Palo Alto Networks security solution that provides secure access to applications and data.

Answer: (SHOW ANSWER)

Palo Alto Networks is a leading provider of network security solutions. Its Strata Cloud Manager (SCM) is a cloud-based management platform for Palo Alto Networks firewalls. Prisma Access is a cloud-based security solution that provides secure access to applications and data. It is based on the principle of "least privilege" and uses a combination of identity, device, and context-based policies to control access. GlobalProtect is a Palo Alto Networks security solution that provides secure access to applications and data. It is based on the principle of "least privilege" and uses a combination of identity, device, and context-based policies to control access.
