Tableau is a data visualization tool that allows users to create interactive dashboards and reports. It is designed to be user-friendly and easy to use, making it a popular choice for businesses of all sizes. Tableau's interface is intuitive, and it offers a wide range of visualization options, including bar charts, line graphs, and maps. Additionally, Tableau integrates with a variety of data sources, allowing users to connect to their existing databases and data warehouses. This makes it a powerful tool for data analysis and reporting.

This makes it a powerful tool for data analysis and reporting.

SUM(sales) is a calculated field in Tableau that represents the total sales. It is calculated by summing the sales values for each row in the data source. The Color field is used to categorize the data into different groups, such as by region or product line. This allows users to compare sales performance across different categories and over time.

Development-Lifecycle-and-Deployment-Architect is a role that focuses on the design and implementation of software systems. This role involves working with development teams to create scalable and reliable architectures. Key responsibilities include defining system requirements, designing database schemas, and implementing security measures. The role also involves monitoring system performance and troubleshooting issues. This is a critical role in ensuring the success of any software project.
